# Standards and Safety

## New standards with new requirements – no problem, thanks to Rexroth

Whether the task involves machine tools, packaging and printing machines, assembly, handling or robot applications, the protection of personnel, machines and tools is absolutely paramount. Safety is therefore a topic of prime concern to users and manufacturers alike, and one which demands intensive cooperation between the automation partner and the machine manufacturer. As an all-around automation partner, Rexroth provides access to unique know-how across all drive and control technologies and complying with requirements such as "safe motion", "safe processing of peripheral signals" and "safe communication."

As a technology leader, Rexroth offers consistent functional safety on all automation levels: from components through to system solutions including software, Rexroth provides machine manufacturers and end users with high-quality products based on the newest safety engineering.

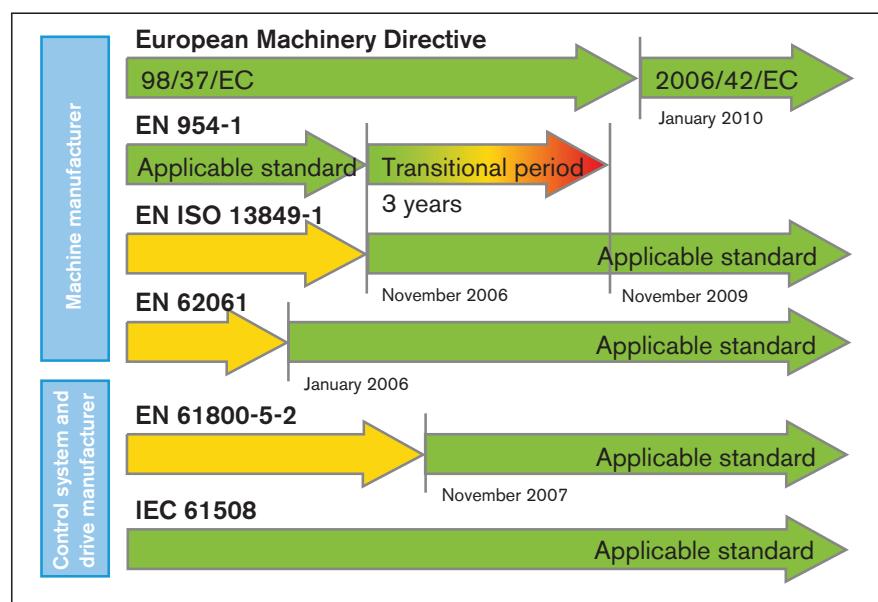

Every manufacturer of plant and machinery is responsible for ensuring that his products meet basic safety requirements. The new European Machinery Directive 2006/42/EC and the Machinery Safety Standards EN ISO 13849-1 – in the latest revision – and EN 62061 provide the framework: In an extensive evaluation with statistical parameters, machine manufacturers must proof protection of personnel under consideration of all components and systems installed into the machine or production system.

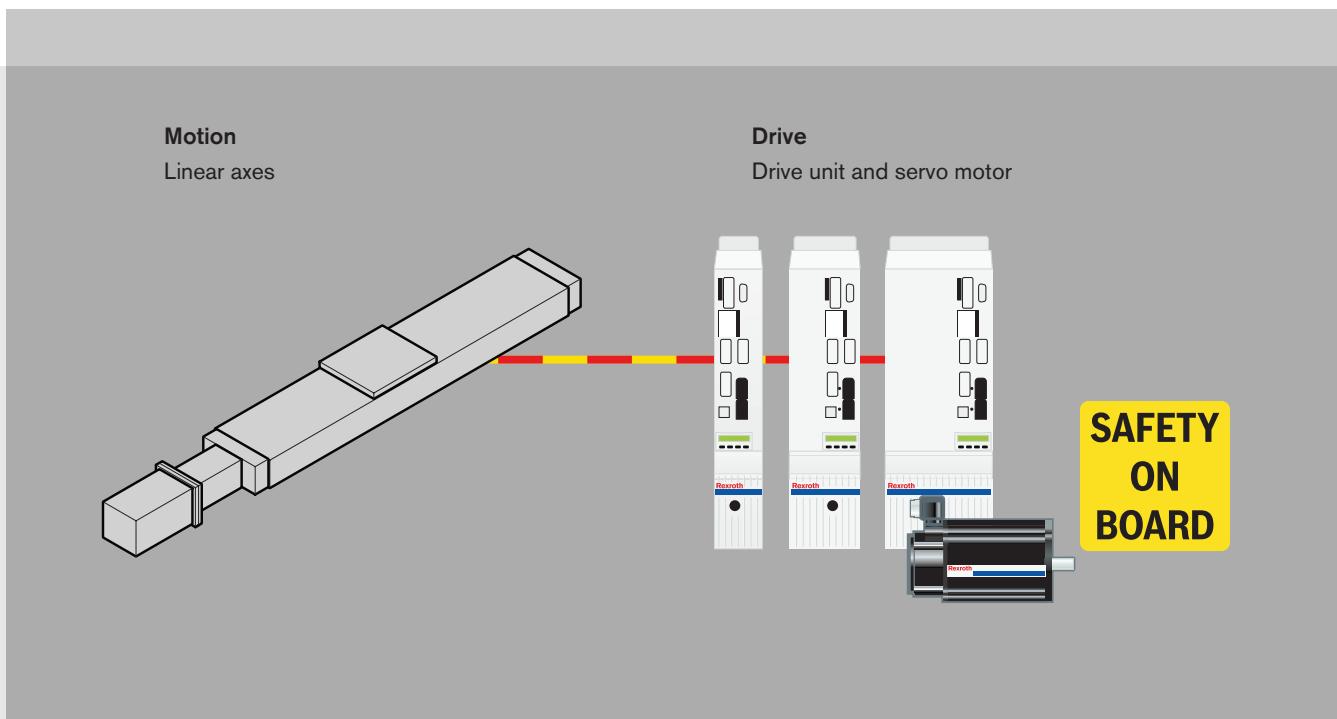

The goal is to identify and reduce risks. Intrinsically safe designs therefore always have higher priority over protective safeguards and warning notices in the documentation. If hazards are to be minimized by the use of safety-critical control components, the EN ISO 13849-1 comes to bear. The machine manufacturer must specify the required performance level, i.e. the reliability, of the safety functions.

### Your tasks...

In order to comply with the standards, machine manufacturers and their suppliers must perform the following tasks:

- As per European Machinery Directive 2006/42/EC: Risk assessment and reduction of risks.
- As per ISO 13849: Estimation of the reliability of safety functions dependent upon, e.g.
  - the hardware-oriented structure
  - the mean time to dangerous failure (MTTFd)
  - the diagnostic coverage (DC) of a safety function.

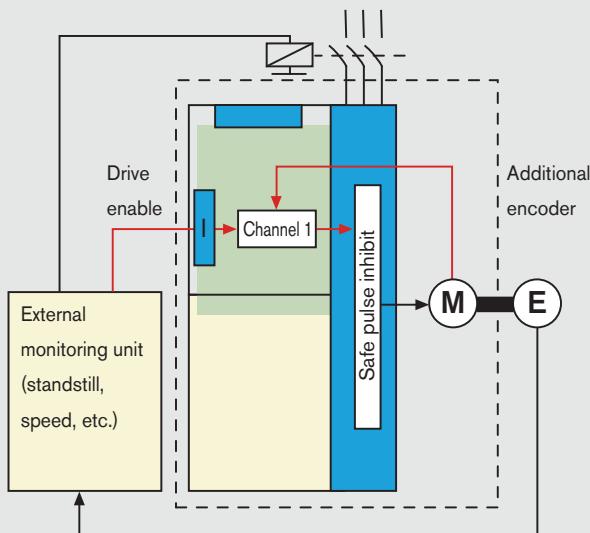

### ...our solutions

Rexroth provides perfectly matched certified control systems, controllers and motors with integrated functional safety, thereby making work easier for designers and machine manufacturers.

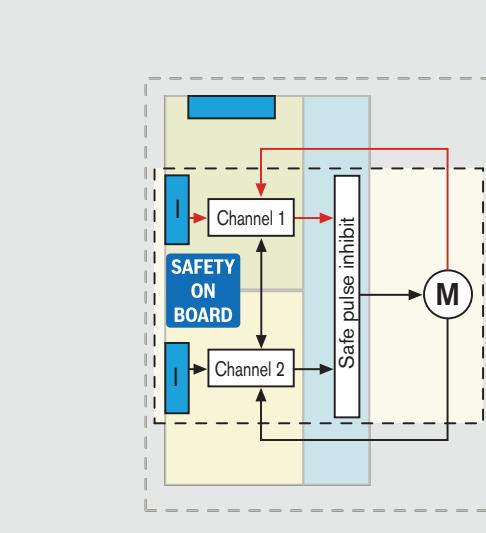

The benefits for you are:

- **reduced development effort** to comply with the new standards, e.g. through automation products with certified safety functions, certified components and tested circuits;
- **simplified design process** for safe machinery through single-source drive and control technologies;
- **effective protection of personnel** through safe movements in all drive technologies and the fast reaction of monitoring functions.

#### Conventional safety solution involving external relays

#### IndraDrive drive-integrated safety technology

## Standards and Safety

### Our drives and controls – your safety

The safety technology is exclusively available for linear axes with MSK motors and IndraDrive.

The appropriate products carry a “SAFETY ON BOARD” label.

### SAFETY ON BOARD

Safety on Board merges drive-based and controller-based safety solutions to form a smart comprehensive safety concept.

These safety solutions in our drive systems (IndraDrive) and controllers assure a high level of diagnostic coverage and hence a high availability of the safety functions.

#### Your advantages:

- Maximum protection for personnel
- Maximum safety and reliability
- Safety components tested and certified in accordance with the latest safety standards
- Functional and legal assurance
- Reduced downtime
- Increased availability
- Simplified start-up and validation
- Minimized cost and effort for validation
- Easy upgrading of standard components to full-fledged safety components
- Flexible use as stand-alone safety components or as part of a system solution

### SafeMotion

The drive-integrated safety technology in IndraDrive from Rexroth monitors movements where they are generated. The results are very rapid response times of just 2 milliseconds upon triggering of the internal monitors.

Even in the case of a power failure, a hydraulic feed axis with mechanical clamping can come to a safe stop within milliseconds.

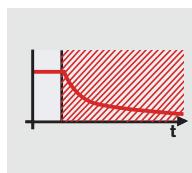

Rexroth provides these intelligent drive solutions as certified safety components with all the necessary proofs. SafeMotion is thus the first step in the realization of safe machine concepts.

#### Your advantages:

- Effective protection of personnel
- High reliability thanks to certified and integrated solution
- Maximum assurance against tampering through drive-integrated monitoring system
- Reduced design effort through savings on time and money spent on certification
- Increased availability through reduced downtimes
- Increased machine productivity as a result of shorter special mode times
- No unnecessary idle times because the line circuit breaker does not have to be opened when undertaking work on the machine
- No need for re-synchronization of coupled axes after intervention work on the machine
- Savings on limit switches, measurement and analysis units and control cabinet size
- Fault detection without the need for any periodic machine shutdown
- Can be integrated into any kind of system architecture
- Easy start-up
- Easy to service

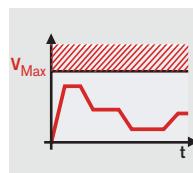

For more information, refer to the brochure “Safety on Board – Functional Safety in Automation Technology,” R911 322 823.

## SafeMotion – Certified safety functions

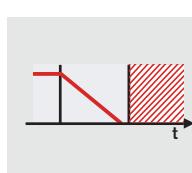

### Safe Torque Off (STO)

Stop category 0 in accordance with EN 60204-1: Safe drive torque cut off

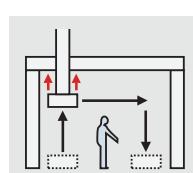

### Safe Maximum Speed (SMS)

The maximum speed is safely monitored irrespective of the mode of operation

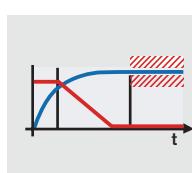

### Safe Stop 1 (Emergency Stop) (SS1)

Stop category 1 in accordance with EN 60204-1: Safely monitored stop, control or drive controlled with safe drive torque cut off

### Safe Braking and Holding System (SBS)

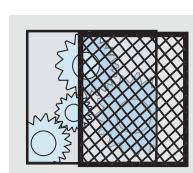

The safe braking and holding system controls and monitors two independent brakes

### Safe Stop 2 (SS2)

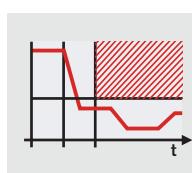

#### Safe Operating Stop (SOS)

Stop category 2 in accordance with EN 60204-1: Safely monitored stop with safely monitored standstill at controlled torque

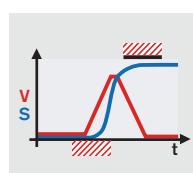

### Safe Door Locking (SDL)

When all the drives in one protection zone are in safe status, the safety door lock is released

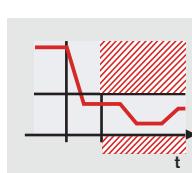

### Safely Limited Speed (SLS)

If enable signal is given, a safely limited speed is monitored in special operating mode

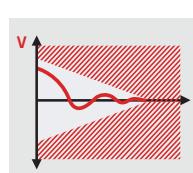

### Safely Limited Increment (SLI)

If enable signal is given, a safely limited increment is monitored in special operating mode

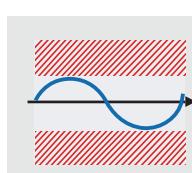

### Safe Direction (SDI)

A safe direction (clockwise, counter-clockwise) is also monitored in addition to safe motion

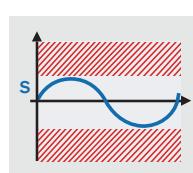

### Safely Monitored Deceleration (SMD)

Safely monitored deceleration ramp when stopping

### Safely Monitored Position (SMP)

A safe absolute position range is also monitored in addition to safe motion

### Safely Limited Position (SLP)

Monitoring of safe software limit switches

### Safe Inputs/Outputs (SIO)

Dual-channel safety peripherals can be connected to the drive and made available to the controller via the safety bus

### Safe Communication (SCO)

Selection/deselection of safety functions and transfer of process data (e.g. actual position values) via safety bus

All safety functions are certified as compliant with standards ISO 13849-1:2006<sup>1)</sup>, IEC 61800-5-2:2007<sup>1)</sup>, IEC 61508:1998-2000<sup>1)</sup>, IEC 62061<sup>1)</sup>, ISO 13849-1:1999, EN 954-1:1996, ISO 13849-2:2003, IEC 60204-1:1997, EN 50178-1:1997, IEC 61800-3:2004, UL 508C R7.03, C22.2 No. 0.8-M86 (R2003), CAN/CSA C22.2 No. 14-95, NFPA 79:2007 ER1 through TÜV Rheinland, TÜV Rheinland North America Inc. and SIBE Switzerland.

**Electromechanical**  
**Cylinders**

# Product Overview

## Electromechanical Cylinders EMC

Because of the actuator choices that electromechanical drive solutions offer, they are becoming more and more widespread as an alternative to fluid driven technology. The Electromechanical Cylinder EMC from Rexroth is a powerful alternative to pneumatic cylinders while providing significant benefits in terms of energy efficiency, a prime goal in engineering today. It also offers clear conceptual advantages, allowing travel to any intermediate target position as well as creating greater flexibility through higher thrust and variable speeds. Combinations of the various technologies can also result in new application possibilities.

The mechanics are based on established rolled precision ball screw drives available in all current diameter and lead combinations. Performance characteristics such as positioning accuracy, thrust or speed can be optimized to meet the requirements of each specific application.

Through the use of generously sized angular-contact thrust ball bearings LAN, the load rating of the ball screw drive is used to its maximum potential. There are also many choices and possibilities when it comes to drive configurations and mounting elements.

### System advantages

- Many sizes to choose from
- Integrated ball screw drive ensures exact positioning and powerful thrust capability
- Motor attachment via motor mount and coupling or via belt side drive
- Compact construction
- Dynamic drive
- Extensive series of attachments to match every application area
- Quick assembly
- Compatible with other products from Bosch Rexroth
- Stainless steel piston rod
- Optional attachment of Rexroth standard components
- Particularly efficient in applications with a small number of axes
- Preferred stroke lengths: 100, 200, 320 and 400 mm with shorter delivery times
- Low maintenance
- High mechanical efficiency

### Ball screw drives used

EMC size	$d_0$	Ball screw Lead P						
		5	10	16	20	25	32	40
32	12							
40	16							
50	20							
63	25							
80	32							
100	40							

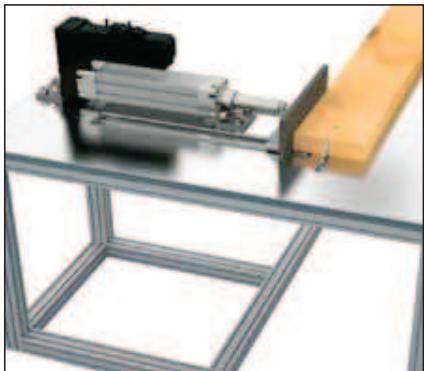

### Application examples

There are many application areas where an EMC can be used, either as a replacement for, or in conjunction with pneumatic and hydraulic technology.

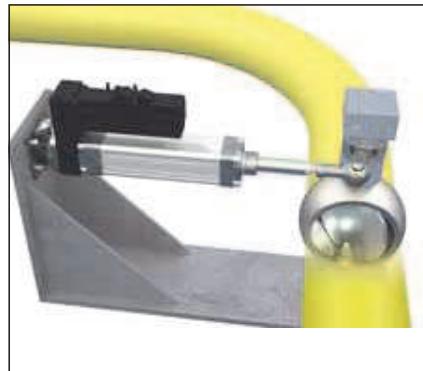

Joining and pressing

Application of contact pressure

Machine tools or woodworking machines

Adjustable mechanical stop for a saw

Dispensing systems

Valve timing

Further application areas:

- Material handling and feed systems
- Test rigs and laboratory applications
- Actuator drives (brush rollers / sensor units / grinding wheels, etc.)
- Welding, bonding, thermoforming
- Volumetric filling

At [www.boschrexroth.com/emc](http://www.boschrexroth.com/emc), you can use the online configurator to select and order your EMC and generate CAD models.

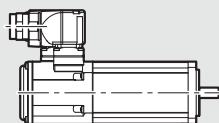

## Product Overview

### Motor Selection

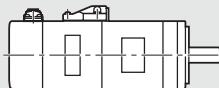

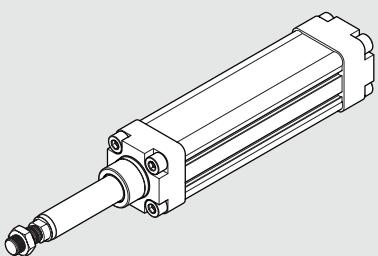

Based on drive controllers and control system

A choice can be made between several different motor/controller combinations to achieve the most cost-effective solution for each customer application. When sizing the drive, always consider the motor-controller combination. For more detailed information on motors and control systems, please refer to the catalogs "IndraDrive Cs for Linear Motion Systems" and "IndraDrive C for Linear Motion Systems."

The Electromechanical Cylinders can be supplied complete with motor, controller and control unit.

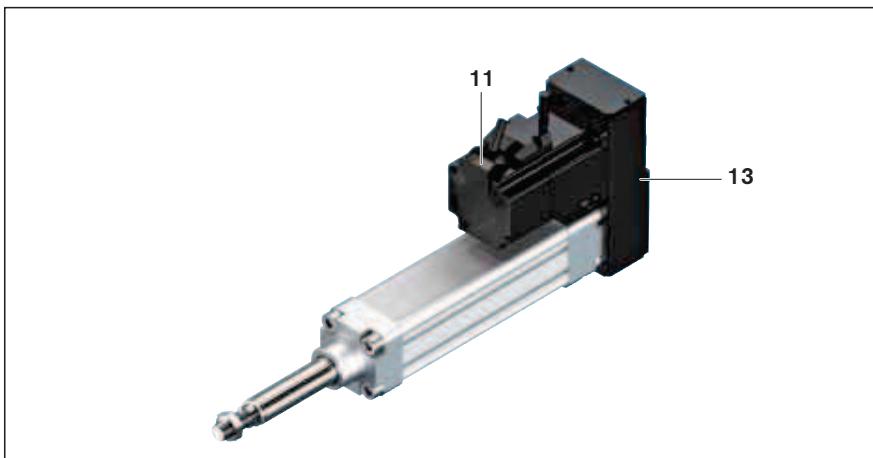

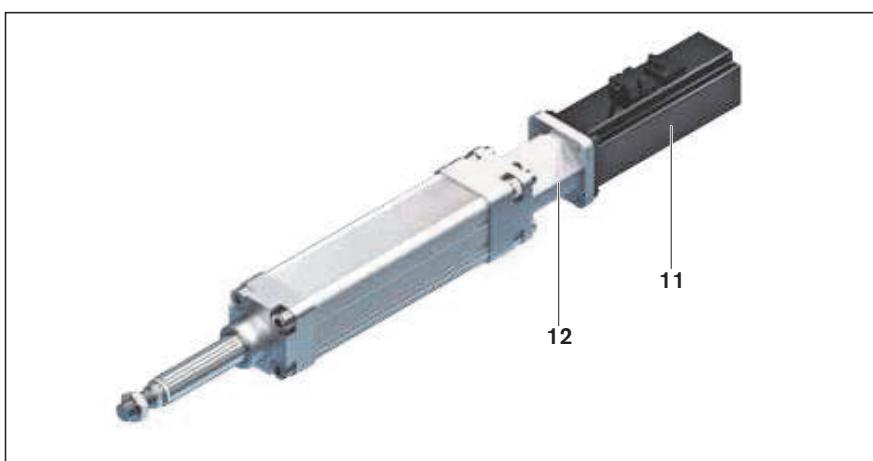

## Structural Design

- 1 Hex nut
- 2 Piston rod (stainless steel)
- 3 Round-neck nut (for attachment of mounting elements and motor attachments)
- 4 Magnet
- 5 Anti-twist feature
- 6 Ball screw
- 7 Angular-contact thrust ball bearing
- 8 Drive journal
- 9 T-slot for switches
- 10 Protective profile

### Attachments

- 11 Motor
- 12 Motor mount and coupling
- 13 Timing belt side drive

## Technical Data and Dimensions EMC

Sizes 32 to 100 follow the standard cylinder series according to ISO 15552.

Built-in ball screw drives have a diameter of 12 mm to 40 mm.

The EMC size is selected according to:

- Thrust
- Stroke
- Linear speed

The actual values must be smaller than the maximum permissible values.

$C_{EMC}$  = dynamic load rating of the EMC  
 $d_0$  = nominal diameter of ball screw

$F_{max\ EMC}$  = maximum load

$M_P$  = max. drive torque at drive journal

$P$  = ball screw lead

$s_{max\ perm.}$  = maximum permissible travel distance

$v_{max}$  = max. permissible linear speed

Maximum travel distance  $s_{max}$  per customer specifications (minimum 100 mm)

EMC size	Ball screw		$C_{EMC}^{1)}$ (N)	$F_{max\ EMC}^{2)}$ (N)	$M_P^{2)}$ (Nm)	$v_{max}^{3)}$ (m/s)	$s_{max\ perm.}$ (mm)
	$d_0$ (mm)	$P$ (mm)					
32	12	5	3800	580	0.51	0.57	750
	12	10	2500	440	0.78	1.13	750
40	16	5	12300	2800	2.46	0.38	750
	16	10	9600	2200	3.95	0.77	750
	16	16	9600	1700	4.87	1.23	750
50	20	5	14300	5800	5.09	0.32	900
	20	10	14100	4700	8.30	0.63	900
	20	20	13300	3100	11.08	1.27	900
63	25	5	15900	15900	14.06	0.28	1200
	25	10	15700	15700	27.76	0.55	1200
	25	25	14700	11900	52.44	1.38	1200
80	32	5	21600	19100	16.89	0.25	1500
	32	10	26000	17400	30.75	0.50	1500
	32	20	19700	13500	47.68	1.00	1500
	32	32	19500	10000	56.86	1.60	1500
100	40	5	29000	29000	25.64	0.18	1500
	40	10	29000	29000	51.28	0.37	1500
	40	20	29000	29000	102.57	0.73	1500
	40	40	29000	22900	161.46	1.47	1500

1) Acceptable loads (recommended from experience):

With respect to the desired service life, loads up to about 20% of the load rating have proved acceptable.

2) The achievable values may vary depending on the version, mounting orientation and maximum travel range  $s_{max}$  ! Charts page 24.

3) Depends on  $s_{max}$  ! Charts page 22.

### Operating conditions

1) Total axial backlash of EMC when new

2) For calculation of the mass moment of inertia

 $M_{RS}$  = frictional torque of system $k_{j\ fix}$  = constant for fixed-length portion of mass moment of inertia $k_{j\ m}$  = constant for mass-specific portion of mass moment of inertia $k_{j\ var}$  = constant for variable-length portion of mass moment of inertia

### EMC with Rexroth mounting elements

For more information please refer to page 32-43.

**⚠ The permissible axial forces for the mechanical cylinder system are reduced when the Rexroth mounting elements are used. The actual load must not exceed the values in the table.**

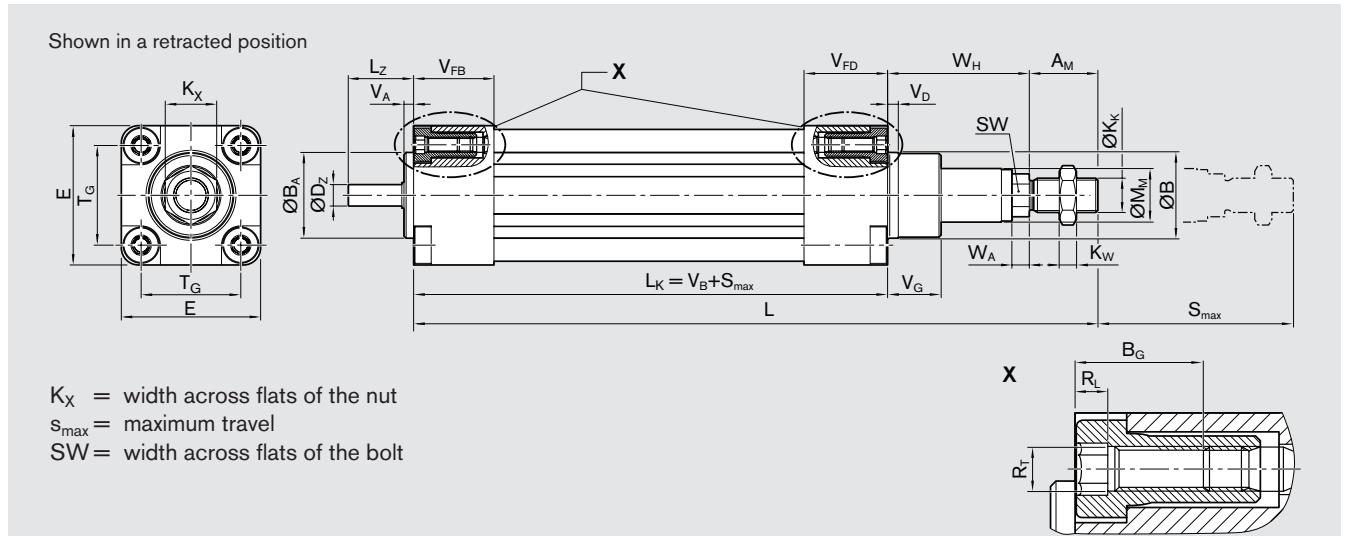

$F < F_{max\ EMC}$  with Rexroth mounting elements

The maximum attainable forces of the EMC/motor combination can be determined by referring to the "Calculations" section.

EMC size	Ball screw $d_0 \times P$ (mm)	Max. axial force (N) $F_{max\ EMC}^1$	F <sub>max EMC</sub> with Rexroth mounting elements

	40x40Rx6-3	40	258	59

$$L_K = V_B + s_{max}$$

$s_{max}$  = maximum travel (mm)

$$L = L_K + A_M + W_H$$

Maximum travel = effective stroke + 2 · excess travel

For safe operation, the excess travel must be longer than the braking distance.

The acceleration travel can be taken as a guideline value for the braking distance.

In most cases, this will be sufficient: Excess travel = 2 · screw lead (P)

Example: Ball screw (d<sub>0</sub> x P) 12x5: Excess travel = 2 · 5 mm = 10 mm

Maximum travel distance  $s_{max}$  per customer specifications (minimum 100 mm)

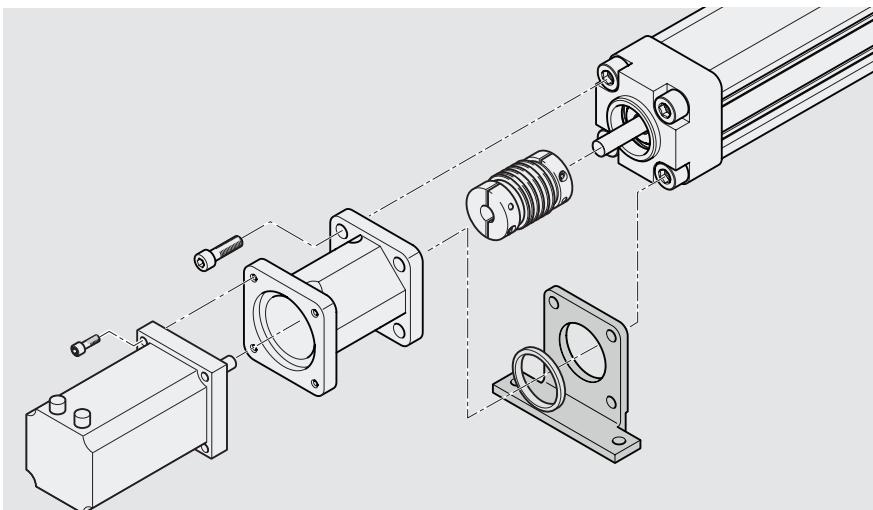

## EMC with Motor Mount and Coupling

The motor mount serves to fasten the motor to the EMC and acts as a closed housing for the coupling. The coupling transmits the motor drive torque free of distortive stresses to the EMC's ball screw journal.

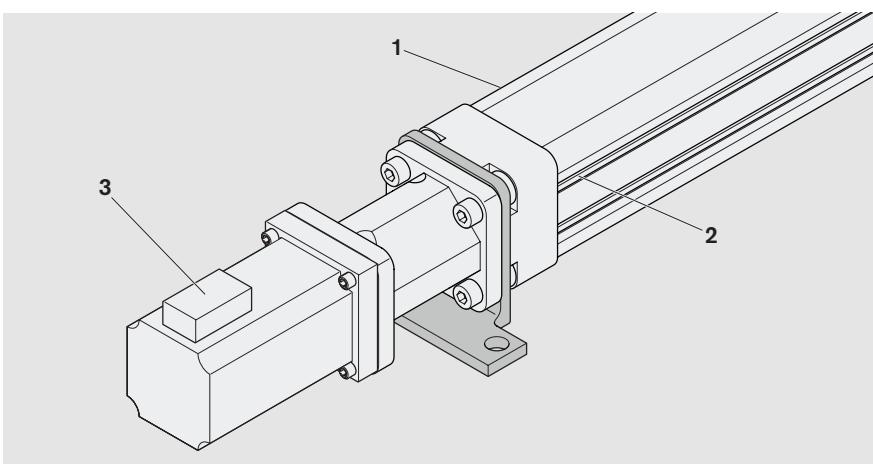

**⚠ When an EMC is ordered with motor mount, motor and foot mounting, this will be delivered pre-assembled. If the foot mounting is to be retrofitted to the cylinder end cap, the motor mount has to be removed first.**

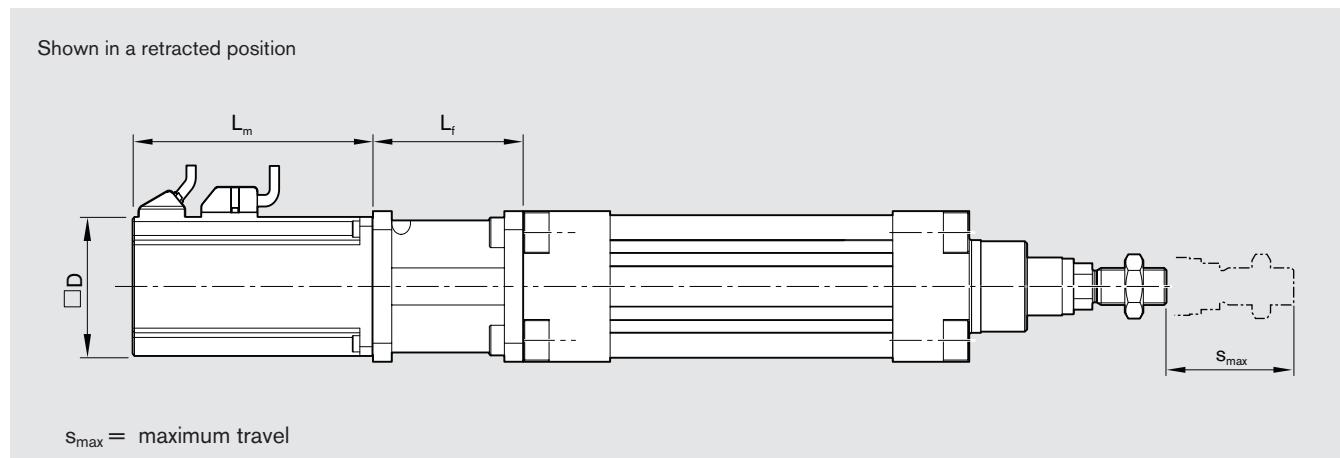

For more information, see "Mounting Instructions for EMC," R320103103

Mounting orientation of motor mount and coupling

- 1 Lube fitting on EMC
- 2 T-slots for switches on EMC
- 3 Motor connector

EMC size	Motor	Coupling			Mass of motor mount and coupling m (kg)	Dimensions (mm)

## EMC with Belt Side Drive

This configuration of the EMC results in the shortest possible installation length. The compact, closed housing protects the belt, secures the motor and serves as a base for fastening mounting elements.

The following gear ratios are available:

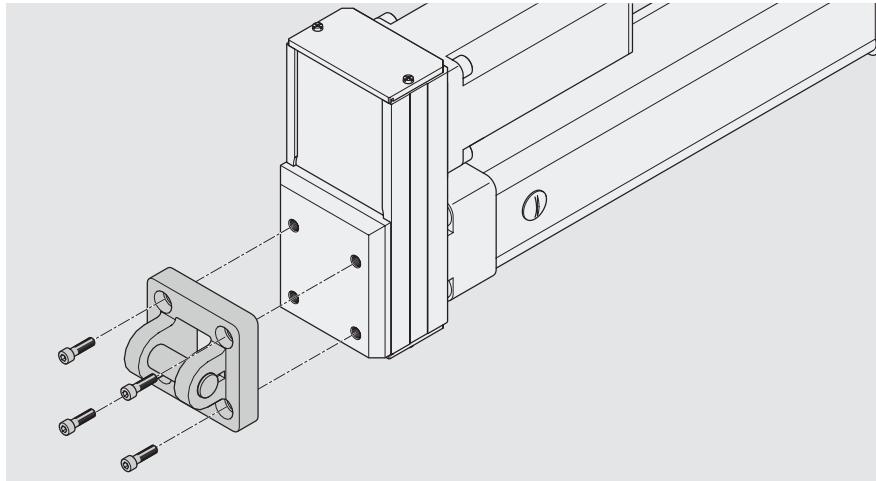

- $i = 1 : 1$
- $i = 1 : 1.5$
- $i = 1 : 2$

The timing belt side drive can be mounted in three different directions (RV01 to RV03).

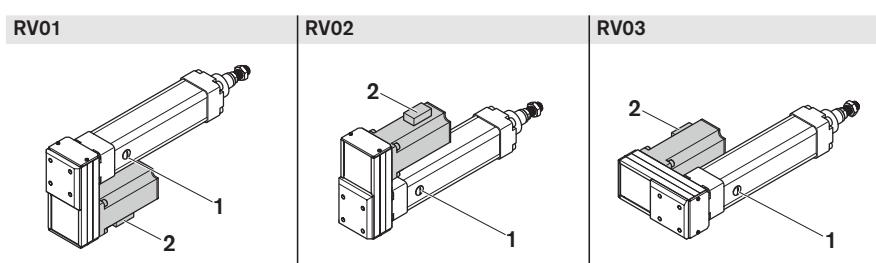

Mounting elements are attached at the rear end of the belt drive. The screws are included in the delivery of the mounting elements.

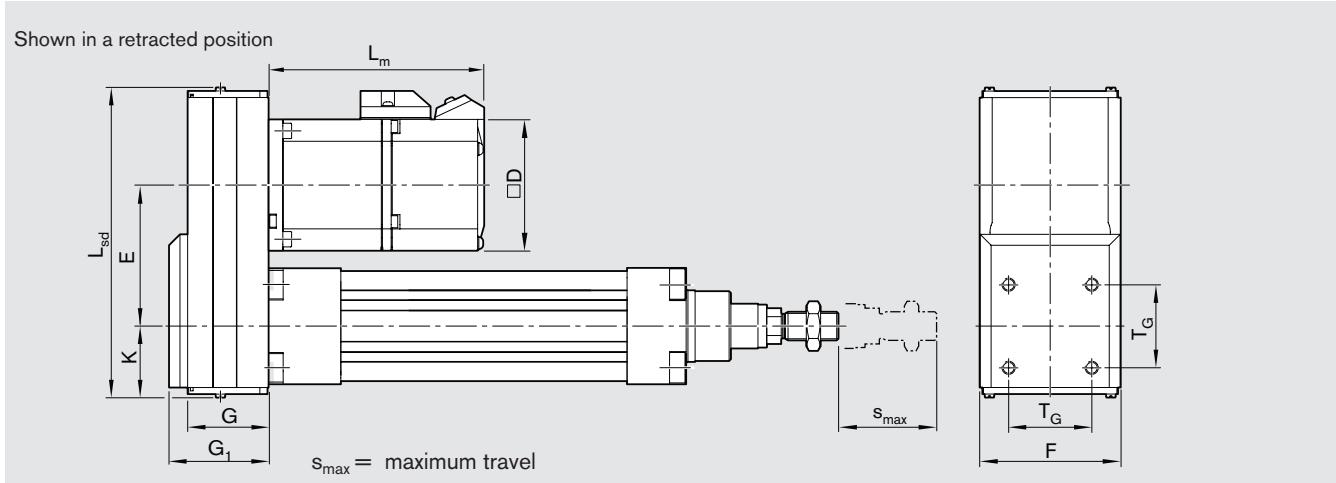

Before attaching the mounting elements, remove the set screws from the timing belt side drive.

Mounting orientations for the timing belt side drive

- 1 Lube fitting on EMC
- 2 Motor connector

EMC size	Motor	Reduction i	Timing belt side drive Type <sup>1)</sup>	Dimensions (mm)			E	$L_{sd}$	F	G	$G_1$	K	$T_G$	M	$T_M$	D	Brake w/o	with	$L_m$

$J_{sd}$  Mass moment of inertia of timing belt side drive (at motor journal)

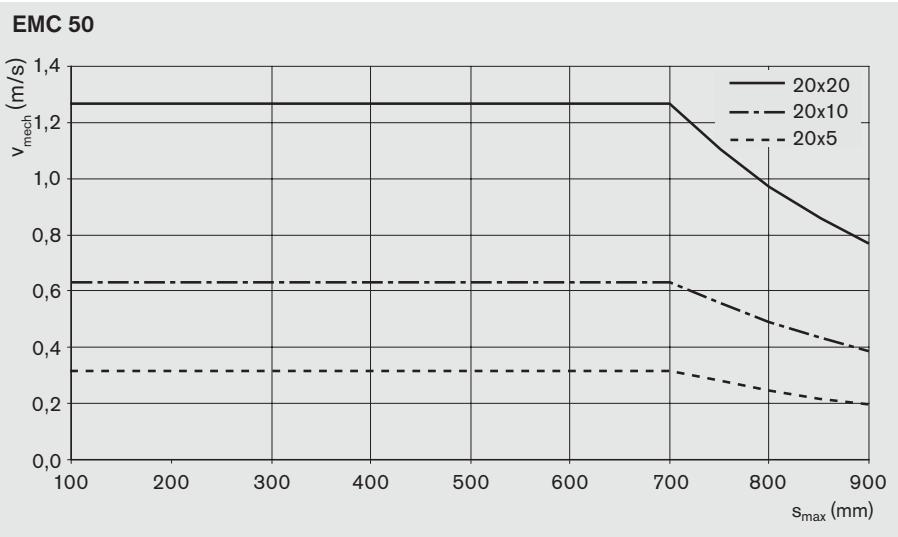

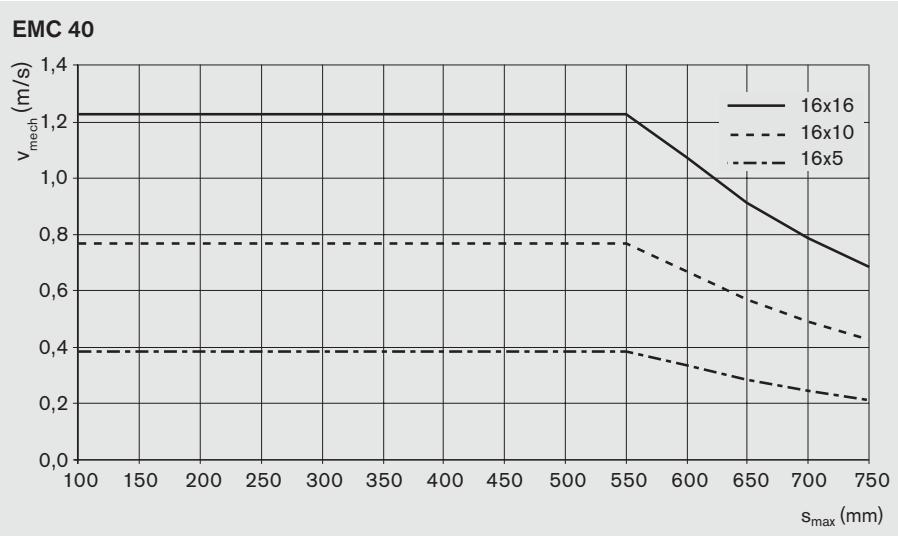

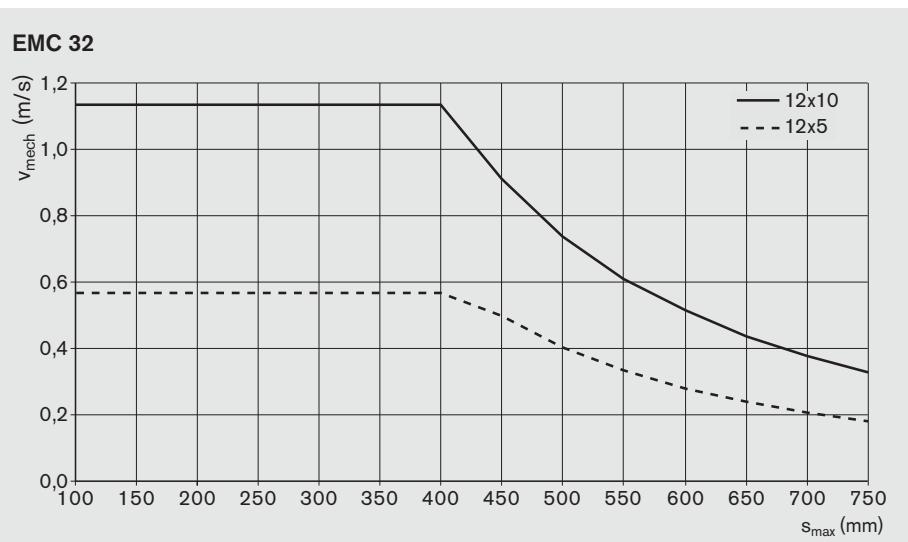

1) See page 25, Table for drive torque according to lead and SD type

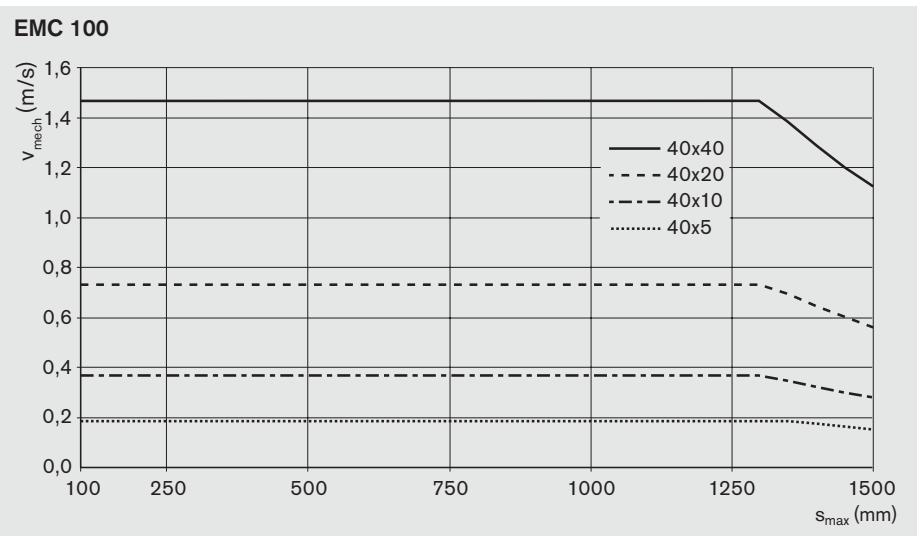

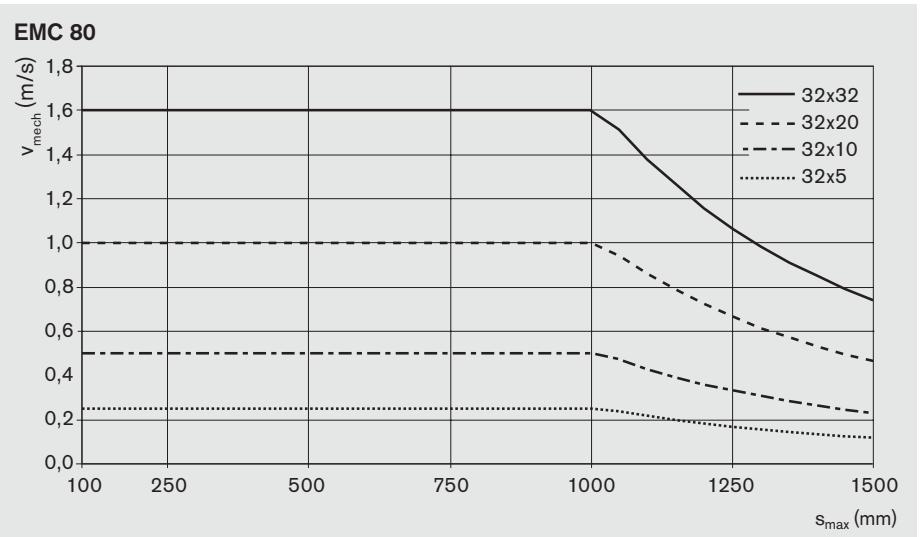

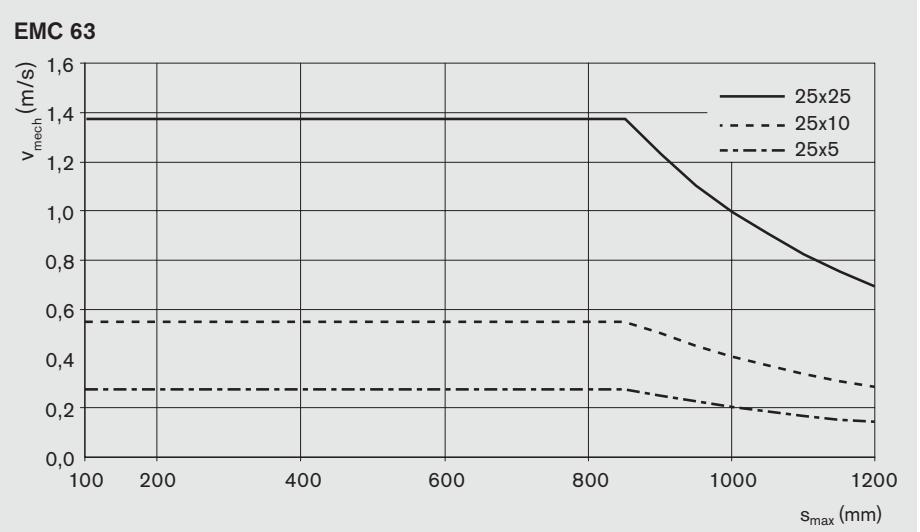

$M_{R\ sd}$  Frictional torque of timing belt side drive

$m_{sd}$  Mass of the timing belt side drive

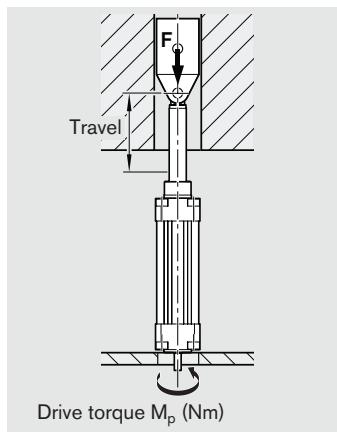

$M_{sd}$  Maximum permissible drive torque of the timing belt side drive ! Table page 25

## Permissible Speeds

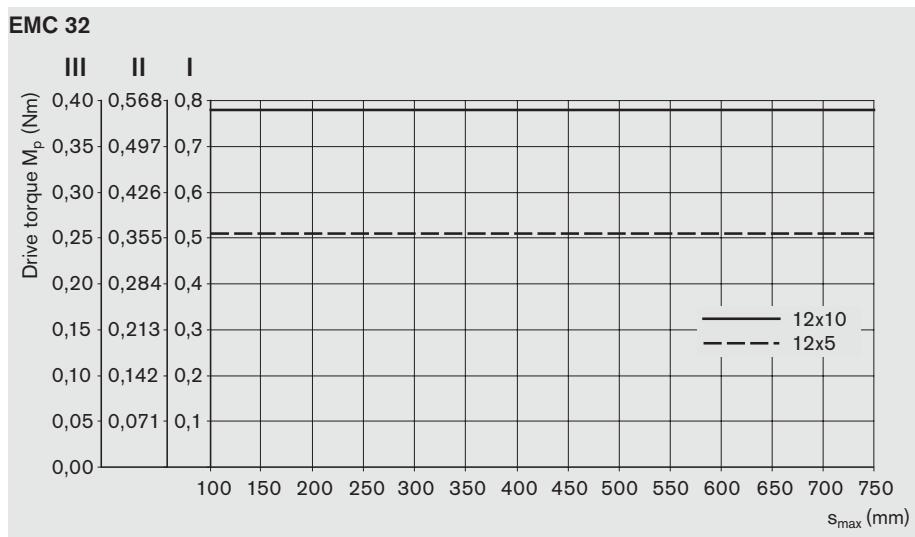

## Permissible Drive Torque $M_p$

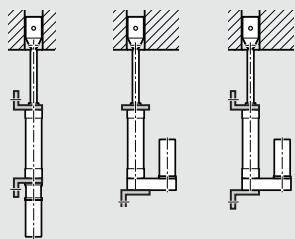

The attainable torques may vary according to the EMC version and the type of mounting.

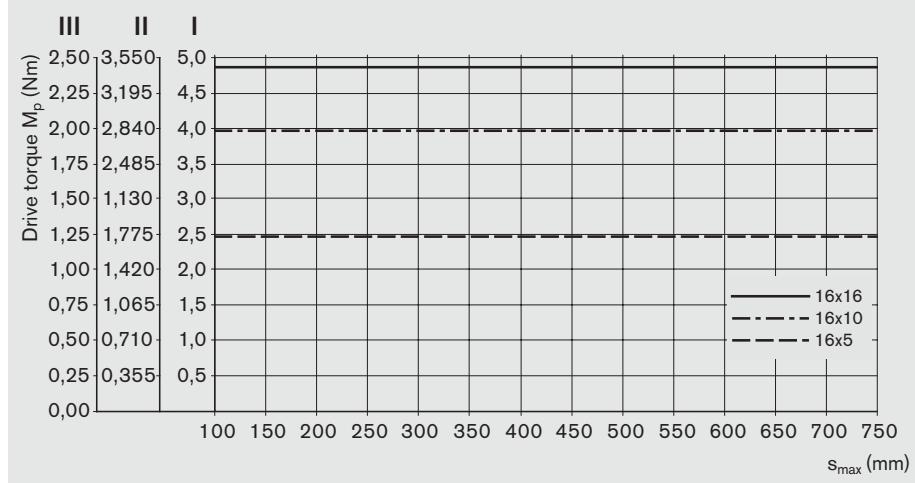

### Case I

Fixed mounting to head and end cap (flange or foot mounting).

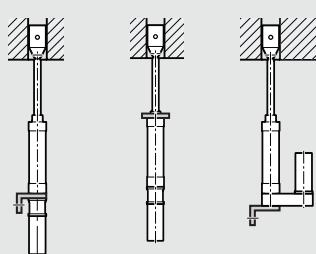

### EMC 40

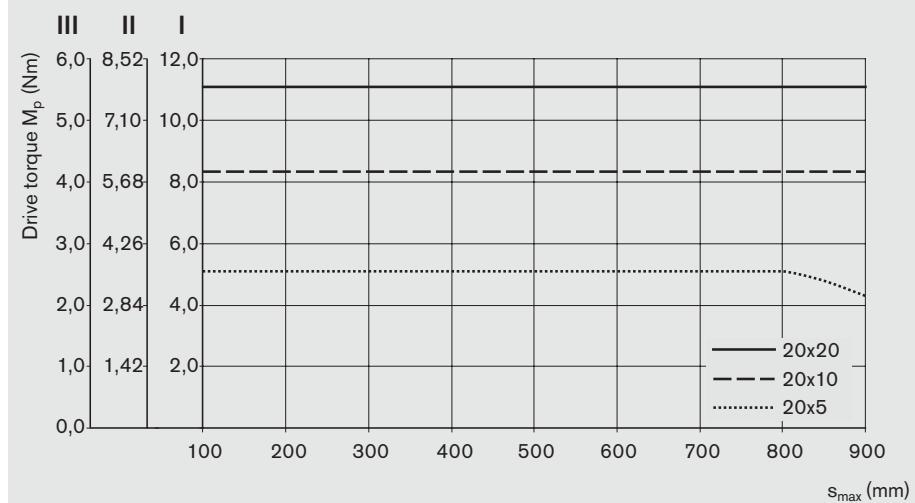

### Case II

Fixed mounting to head cap or end cap (flange or foot mounting).

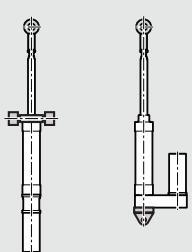

### EMC 50

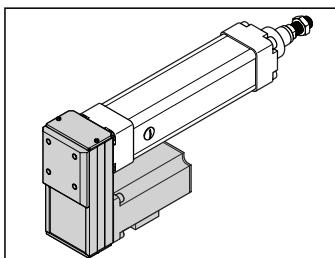

### Case III

All types of articulated mounting.  
Pivotable or swivel mountings.

**Motor attachment with timing belt side drive:**

For motor attachment with timing belt side drive (SD), the **drive torque at the EMC journal** may be limited depending on the version:

EMC	Type	Ball screw lead P (mm)							
		RV	5	10	16	20	25	32	40
32	A	-	-	-	-	-	-	-	-
	B	-	-	-	-	-	-	-	-
40	A	-	3,2	3,2	-	-	-	-	-
	B	-	-	-	-	-	-	-	-
50	A	-	-	-	8,2	-	-	-	-
	B	-	-	-	-	-	-	-	-
63	A	-	18,5	-	-	18,5	-	-	-
	B	-	22	-	-	23,5	-	-	-
80	A	-	24	-	24	-	24	-	-
	B	-	28	-	38	-	42	-	-
100	A	-	-	55	-	-	55	-	-
	B	-	-	80	-	-	80	-	-

When comparing the chart and table, the permissible drive torque is always the lower of the two values.

Example:

EMC 100, ball screw 40x20,

$s_{max} = 700 \text{ mm}$ ,

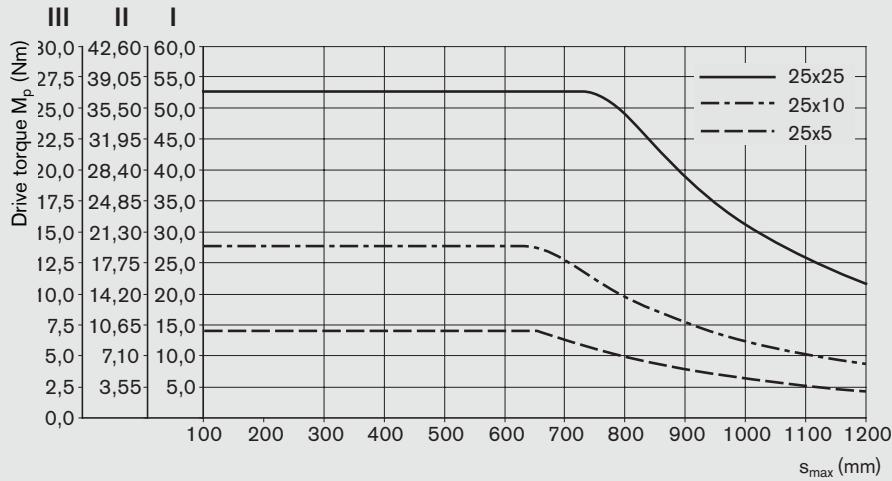

motor attachment with timing belt side drive

Type B:

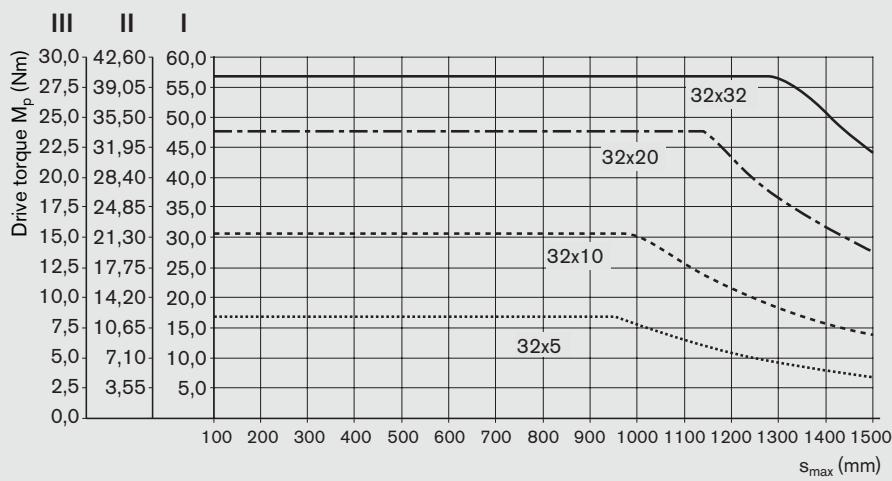

- From chart  $M_p = 102 \text{ Nm}$
- From table  $M_p = 80 \text{ Nm}$

! permissible drive torque at EMC journal:  $M_p = 80 \text{ Nm}$

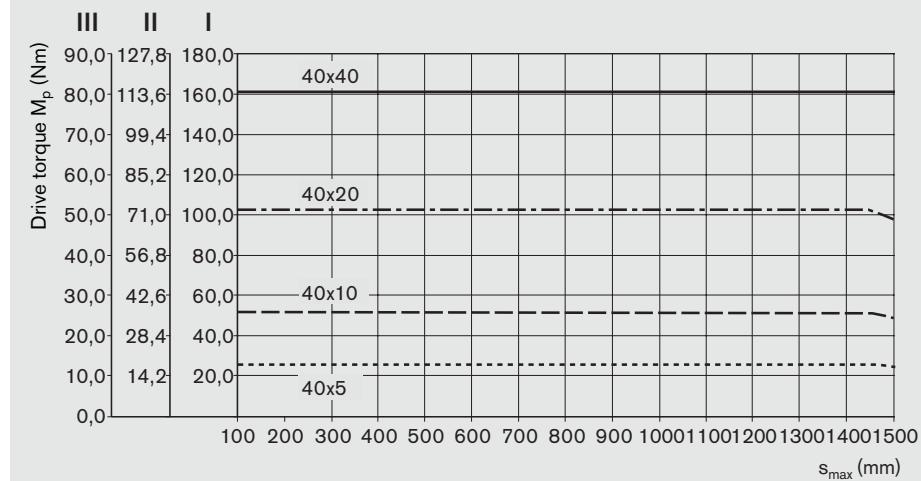

### EMC 63

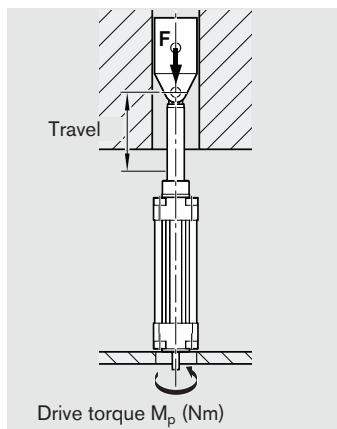

### EMC 80

### EMC 100

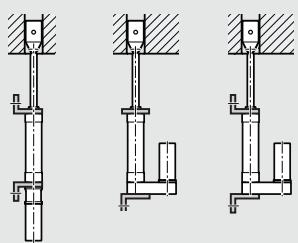

## Maximum Axial Loading of Mechanical Cylinder System $F_{\max}$

The attainable forces may vary according to the type of mounting.

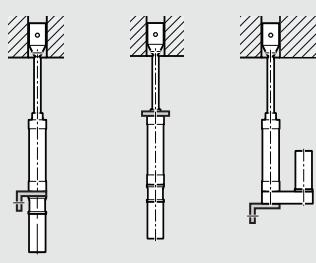

### Case I

Fixed mounting to head and end cap (flange or foot mounting).

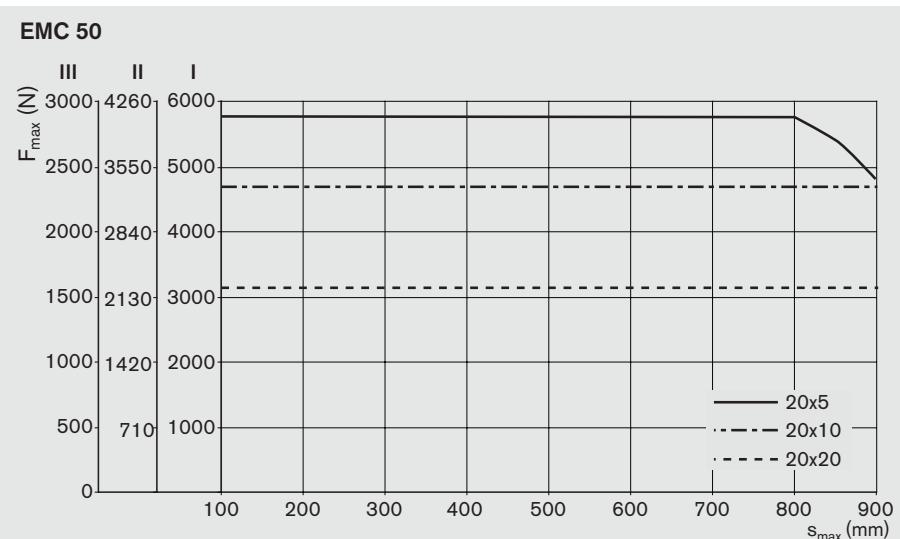

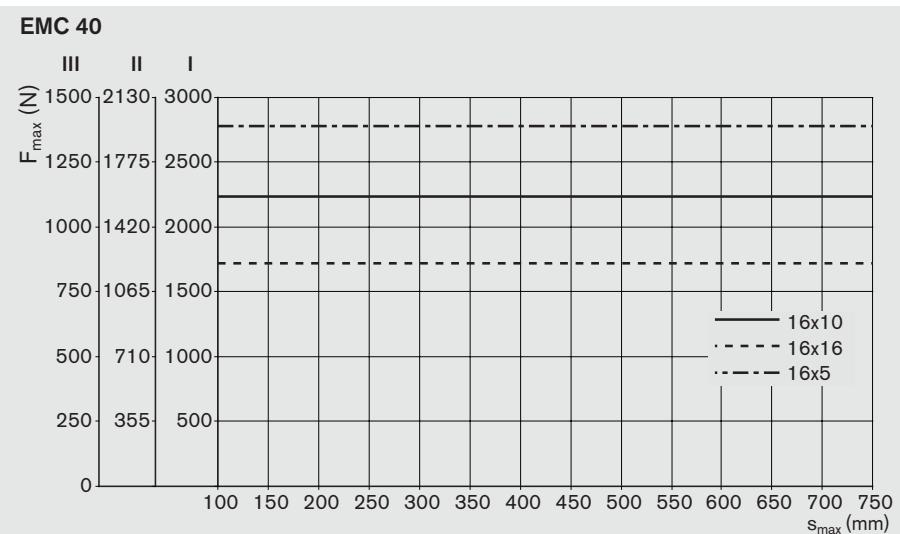

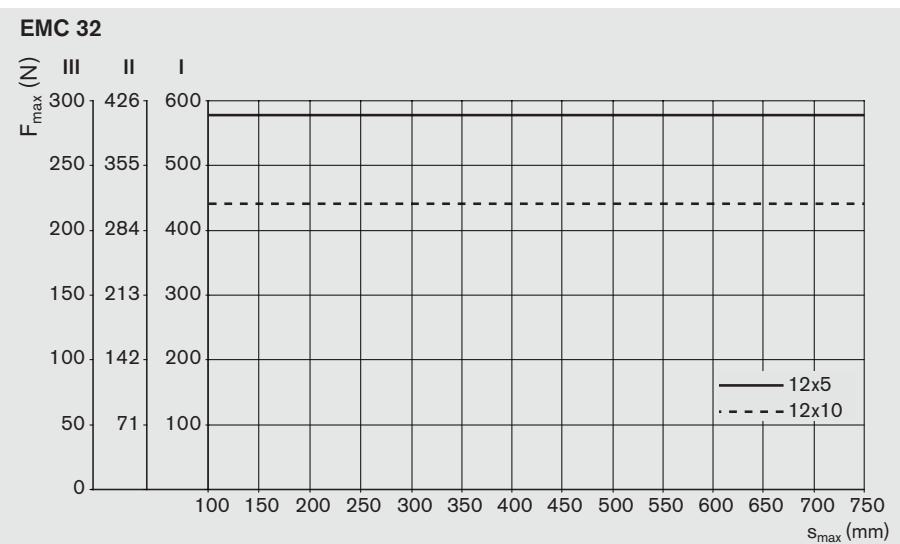

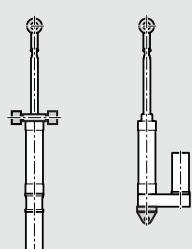

### Case II

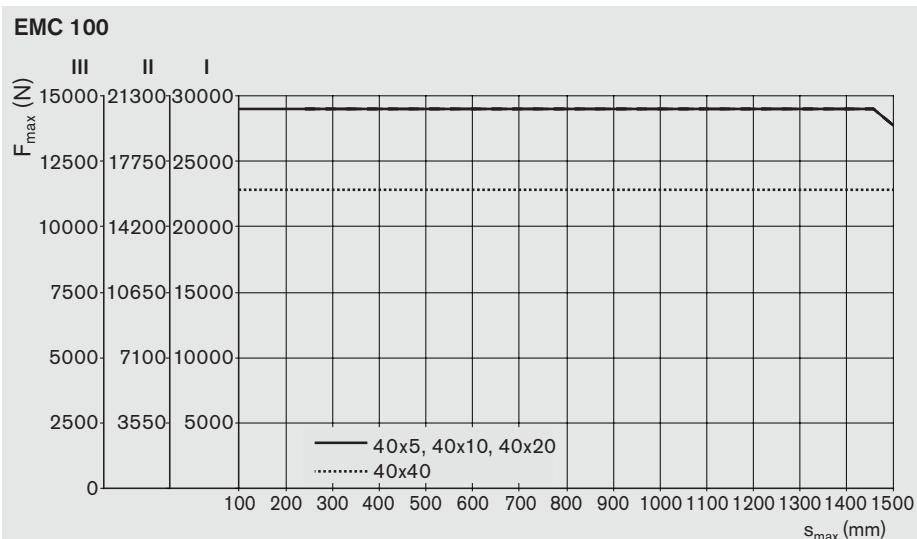

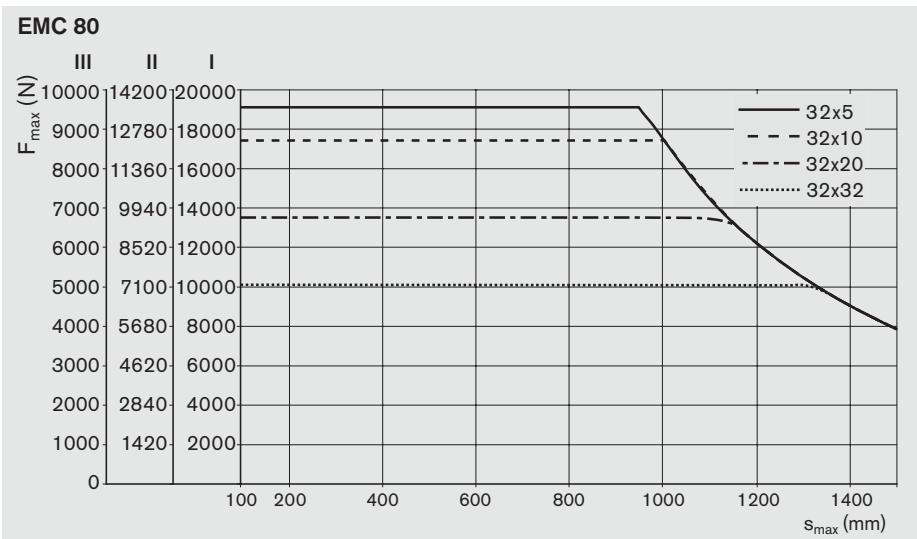

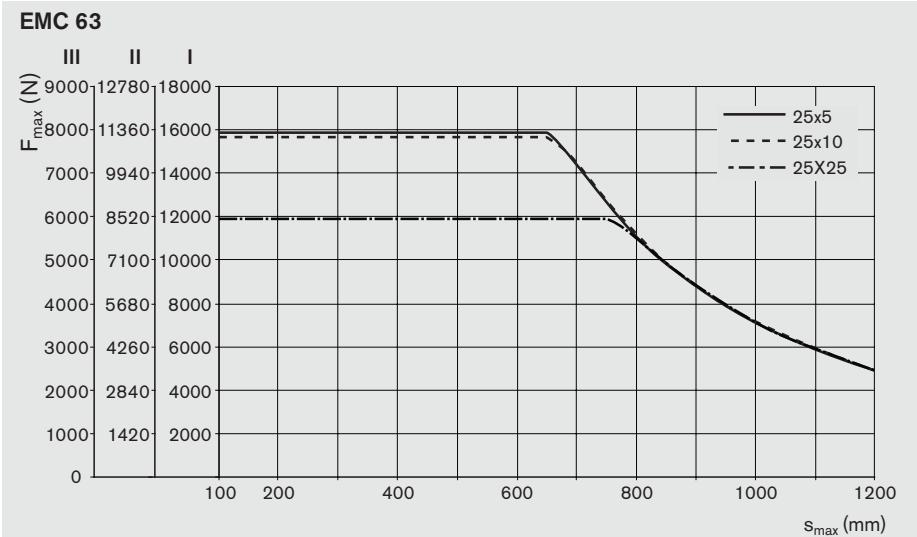

Fixed mounting to head cap or end cap (flange or foot mounting).

### Case III

All types of articulated mounting.  
Pivotal or swivel mountings.

# Calculations

After pre-selection of the mechanical cylinder system, the mounting elements and the cylinder/motor combination, the calculations can now be performed.

The actual loads must be smaller than the maximum permissible loads for the mechanical cylinder system and the mounting elements.

## Average speed and average load

- where the speed fluctuates, the average speed  $n_m$  is calculated as follows
- where the load fluctuates and the speed is constant, the equivalent dynamic axial load  $F_{m, ax}$  is calculated as follows
- where both the load and speed fluctuate, the equivalent dynamic axial load  $F_{m, ax}$  is calculated as follows

Where the operating conditions (speed and load) vary, the service life must be

$$n_m = \frac{q_1}{100} \cdot n_1 + \frac{q_2}{100} \cdot n_2 + \dots + \frac{q_n}{100} \cdot n_n$$

calculated using the average values for  $F_{m, ax}$  and  $n_m$ .

$$F_{m, ax} = \sqrt[3]{F_1^3 \cdot \frac{q_1}{100} + F_2^3 \cdot \frac{q_2}{100} + \dots + F_n^3 \cdot \frac{q_n}{100}}$$

$$F_{m, ax} = \sqrt[3]{F_1^3 \cdot \frac{n_1}{n_m} \cdot \frac{q_1}{100} + F_2^3 \cdot \frac{n_2}{n_m} \cdot \frac{q_2}{100} + \dots + F_n^3 \cdot \frac{n_n}{n_m} \cdot \frac{q_n}{100}}$$

$F_{m, ax}$  = equivalent dynamic axial load (N)  
 $n_m$  = average rotary speed ( $\text{min}^{-1}$ )  
 $q$  = discrete time step for phases 1 ... n (%)

## Nominal life

### Service life in revolutions L

$$L = \left[ \frac{C}{F_{m, ax}} \right]^3 \cdot 10^6 \Rightarrow C = F_{m, ax} \cdot \sqrt[3]{\frac{L}{10^6}} \Rightarrow F_{m, ax} = \frac{C}{\sqrt[3]{\frac{L}{10^6}}}$$

$C$  = dynamic load capacity (N)  
 $F_{m, ax}$  = equivalent dynamic axial load (N)

### Service life in hours $L_h$

$$L_h = \frac{L}{n_m \cdot 60}$$

$L_h$  = service life (h)  
 $L$  = service life (revolutions) (–)  
 $n_m$  = average rotary speed ( $\text{min}^{-1}$ )

$$\text{Machine operating hours} = L_h \cdot \frac{\text{Machine duty cycle}}{\text{Screw duty cycle}}$$

## Drive torque and drive power

### Drive torque $M_p$

Conversion of rotary to linear motion:

$$M_p = \frac{F \cdot P}{2000 \cdot \pi \cdot \eta}$$

$F$  = operating load (N)  
 $M_p$  = drive torque (Nm)  
 $P$  = lead (mm)  
 $\eta$  = mechanical efficiency ( $\approx 0.9$ )

The dynamic drag torque must be taken into account for preloaded ball nut units.

### Drive power $P_a$

$$P_a = \frac{M_p \cdot n}{9550}$$

$M_p$  = drive torque (Nm)  
 $n$  = rotary speed ( $\text{min}^{-1}$ )  
 $P_a$  = drive power (kW)

**Frictional torque  $M_R$** 

for motor attachment via motor mount and coupling:

$$M_R = M_{RS}$$

for motor attachment via timing belt side drive:

$$M_R = \frac{M_{RS}}{i} + M_{R\text{sd}}$$

**Mass moment of inertia  $J_s$** 

of the EMC referred to the drive journal

$$J_s = (k_{J\text{fix}} + k_{J\text{var}} \cdot s_{\max}) \cdot 10^{-6}$$

**Mass moment of inertia  $J_{ex}$** 

of the mechanical system referred to the motor journal

Motor attachment via motor mount and coupling

$$J_{ex} = J_s + J_t + J_c$$

Motor attachment via timing belt side drive

$$J_{ex} = \frac{J_s + J_t}{i^2} + J_{sd}$$

**Translatory mass moment of inertia of external load  $J_t$** 

referred to the drive journal

$$J_t = m_{ex} \cdot k_{Jm} \cdot 10^{-6}$$

**Mass moment of inertia  $J_{dc}$** 

of the drive train referred to the motor journal

$$J_{dc} = J_{ex} + J_{br}$$

**Mass moment of inertia ratio  $V$** 

$$V = \frac{J_{dc}}{J_m}$$

Application area	V
Handling	≤ 6.0
Processing	≤ 1.5

**Total mass moment of inertia  $J_{tot}$**   
referred to the motor journal

$$J_{tot} = J_{dc} + J_m$$

**Maximum permissible rotary speed  $n_{mech}$**   
of mechanical system

$$n_{mech} = \frac{v_{mech} \cdot i \cdot 1000 \cdot 60}{P}$$

$$n_{mech} < n_{m\text{ max}}$$

**Effective stroke**

$$\text{Effective stroke} = s_{\max} - 2 \times \text{excess travel}$$

i = gear ratio

$J_s$  = mass moment of inertia of EMC (without external load)  $(\text{kgm}^2)$

$k_{J\text{fix}}$  = constant for fixed-length portion of mass moment of inertia  $(10^6 \text{ kgm}^2)$

$k_{J\text{var}}$  = constant for variable-length portion of mass moment of inertia  $(10^9 \text{ kgm})$

$M_R$  = frictional torque at motor journal  $(\text{Nm})$

$M_{RS}$  = frictional torque of the system  $(\text{Nm})$

$M_{R\text{sd}}$  = frictional torque of timing belt side drive at motor journal  $(\text{Nm})$

$s_{\max}$  = maximum travel  $(\text{mm})$

$J_{br}$  = mass moment of inertia, motor brake  $(\text{kgm}^2)$

$J_c$  = mass moment of inertia, coupling  $(\text{kgm}^2)$

$J_{dc}$  = mass moment of inertia, drive train  $(\text{kgm}^2)$

$J_{ex}$  = mass moment of inertia of mechanical system  $(\text{kgm}^2)$

$J_m$  = mass moment of inertia, motor  $(\text{kgm}^2)$

$J_s$  = mass moment of inertia of EMC (without external load)  $(\text{kgm}^2)$

$J_{sd}$  = mass moment of inertia of timing belt side drive at motor journal  $(\text{kgm}^2)$

$J_t$  = translatory mass moment of inertia of external load referred to the drive journal  $(\text{kgm}^2)$

$J_{tot}$  = total mass moment of inertia  $(\text{kgm}^2)$

i = gear ratio of timing belt side drive  $(-)$

$k_{Jm}$  = constant for mass-specific portion of mass moment of inertia  $(10^6 \text{ m}^2)$

$m_{ex}$  = moved external load  $(\text{kg})$

$n_{m\text{ max}}$  = maximum permissible rotary speed of motor with controller  $(\text{min}^{-1})$

$n_{mech}$  = maximum permissible rotary speed of mechanical system  $(\text{min}^{-1})$

P = screw lead  $(\text{mm})$

V = ratio of mass moments of inertia of drive train and motor  $(-)$

$v_{mech}$  = maximum permissible linear speed of mechanical system  $(\text{m/s})$

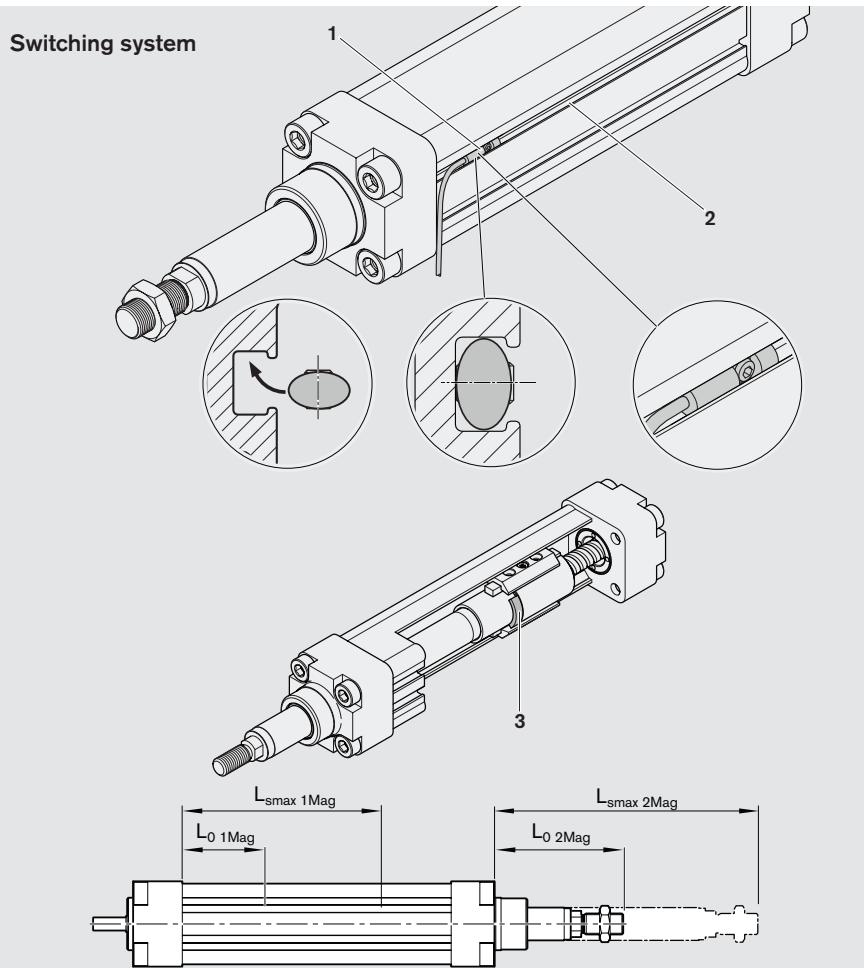

## Switch Mounting Arrangements, Magnetic Field Sensor

### Overview of the switching system

- 1 Switch (magnetic field sensor)
- 2 T-slot for switch
- 3 Magnet

**⚠ For short-stroke applications:  
Consider the length of the switch!**

Magnetic field sensors with potted cables can be used with the EMC.

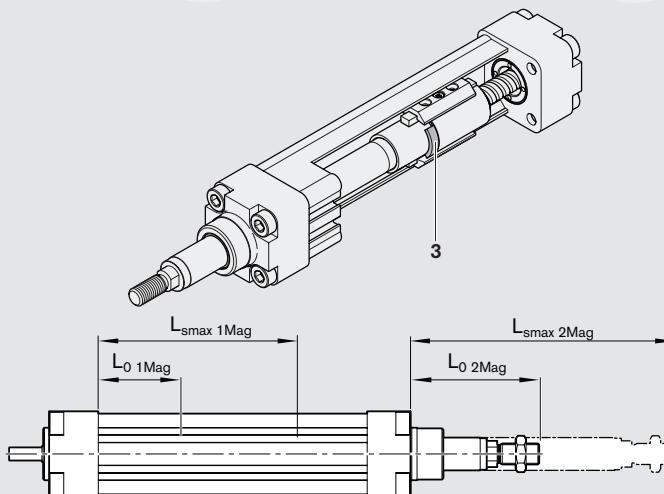

### Version

- Sensor (PNP NC)

### Notes for mounting

The magnetic field sensors (MFS) are pushed into the T-slot and fixed with set screws.

For more details on switch activation points and switch mounting arrangements, see the Instructions for "Electromechanical Cylinders EMC," R320103103.

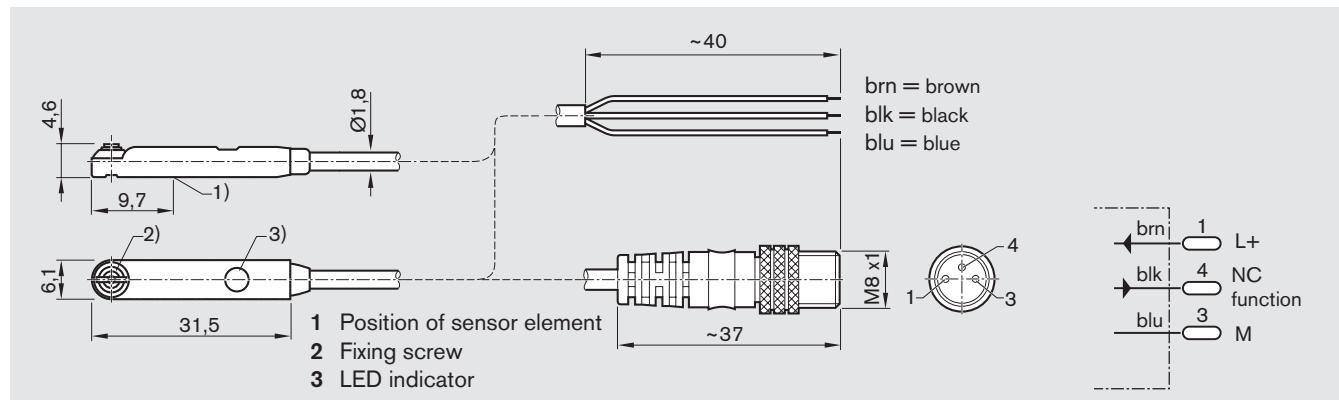

### Switch position

The dimensions in the table indicate the position of the magnet as a function of the travel.

**⚠ The unit must not travel beyond these positions! If it does, there is a risk that the ball nut may collide with the housing.**

EMC size	Ball screw size $d_0 \times P$ (mm)	Dimensions (mm) At travel 0 mm		At travel $s_{\max}$ mm	
		$L_0 1Mag$	$L_{s\max} 1Mag$	$L_0 2Mag$	$L_{s\max} 2Mag$

Switching output	PNP	PNP
Output function	NC function	NC function
Connection type	PVC, 10 m	Cable with M8 connector, 3-pin, knurled screw, PUR, 0.3 m
Enclosure type	IP68, IP69K <sup>2)</sup>	IP68
Contact type	contactless PNP NC	contactless PNP NC
Switching frequency max.	1.0 kHz	1.0 kHz
Wire break protection	yes	yes
Short-circuit protection	yes <sup>3)</sup>	yes <sup>3)</sup>
Polarity safe	yes	yes
Power-up pulse suppression	yes	yes
Shock/vibration stress	30g, 11 ms/10 ... 55 Hz, 1 mm	30g, 11 ms/10 ... 55 Hz, 1 mm
Ambient temperature $T_a$	-30 ... 80 °C	-30 ... 80 °C
Housing material	Plastic	Plastic

- 1) at rest  
2) as per DIN 40050, Part 9  
3) (clocked)

### Extension cable for sensor

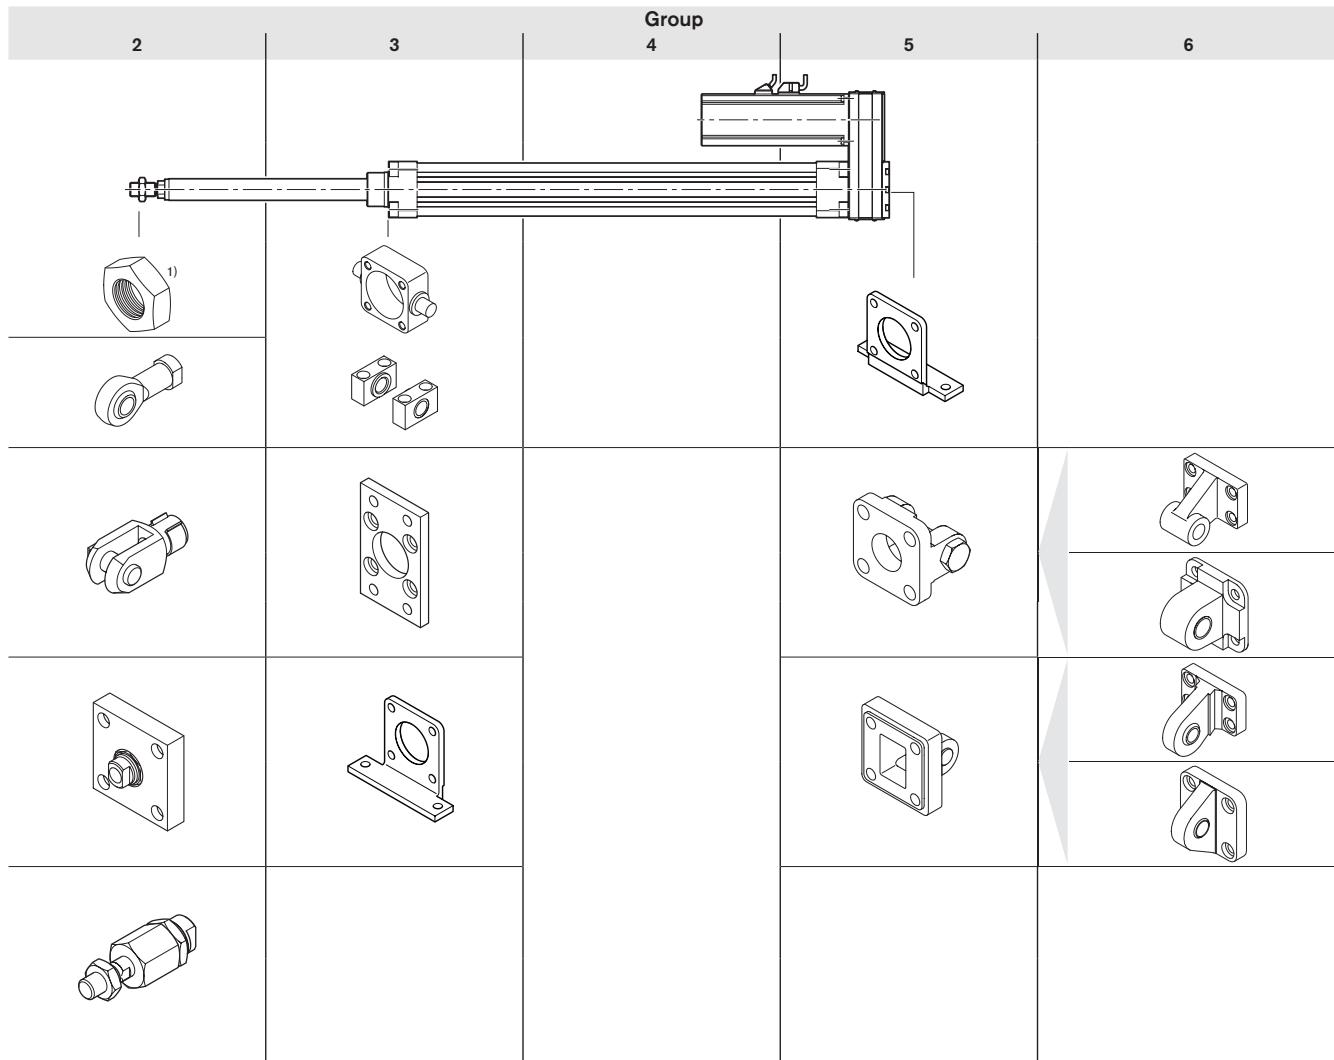

The extension cable (approx. 5 m) is supplied complete with a female connector M8x1 for connection to the sensor.

Part number	Connector contact	1	3	4	Protection class
R3476 025 03	to core	brown	blue	black	IP 66 when connected
	Pin assignment	+3.8 ... 30 VDC	0V ground	Output	

## Mounting Elements

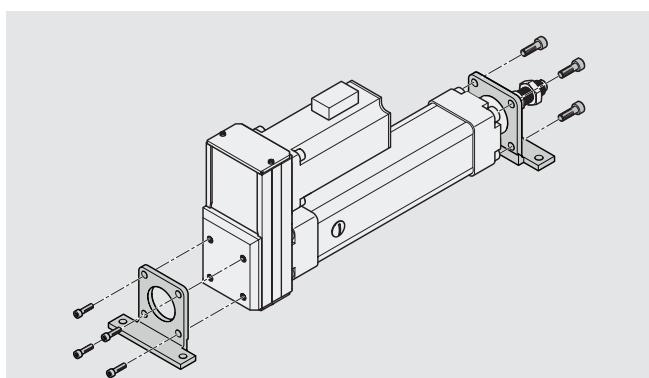

For EMC with belt side drive and motor

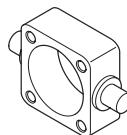

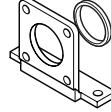

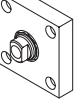

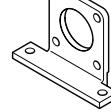

1) Nut is included in the scope of delivery. Can be ordered as an accessory.

### Attaching the mounting elements

Mounting elements are attached at the rear end of the belt drive. The screws are included in the delivery of the mounting elements.

**For EMC with motor mount and motor**

2	3	Group 4	5
			
			
			
			
			

1) Nut is included in the scope of delivery. Can be ordered as an accessory.

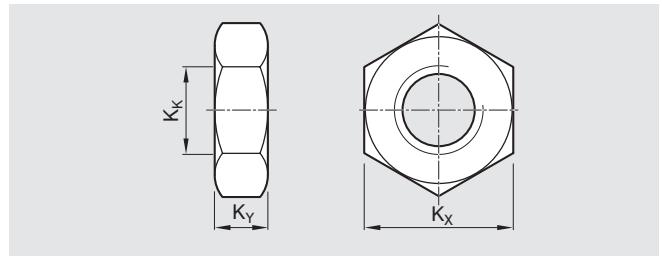

# Mounting Elements

100																

SW = width across flats

- For mounting to the piston rod end:
- self-aligning
  - increases mounting tolerances
  - simplifies cylinder mounting

### Flange mount

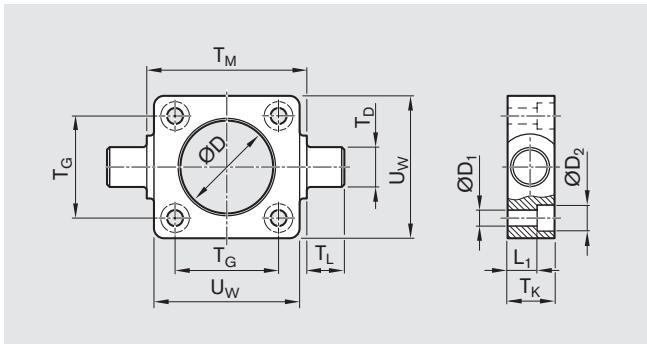

Material: galvanized steel

EMC size	Part number	Dimensions (mm)												Weight (kg)	
		ØD H11	ØD <sub>1</sub> H13	ØD <sub>2</sub> H13	E max.	ØF <sub>B</sub>	L <sub>4</sub>	M <sub>F</sub>	R	T <sub>F</sub>	T <sub>G1</sub> ±0.2	U <sub>F</sub>

# Lubrication

## Grease lubrication

Standard lubrication practices for ball bearings also apply to the ball screws used in the EMC.

The advantage of grease lubrication is that the ball screw can run long distances on one supply of grease. As a result, a lubricating system is not required in many cases.

All commercially available high-quality ball bearing lubricating greases may be used. Read the lubricant manufacturer's specifications carefully! Never use greases with solid lubricant components (e.g. graphite or MoS<sub>2</sub>).

Greases in accordance with DIN 51825-K2K and, for higher loads, KP2K of NLGI Class 2 in accordance with DIN 51818 are recommended for the longest possible lubrication intervals. Tests have shown that greases of NLGI Class 00 achieve only about 50% of the running performance of Class 2 at higher loads. The relubrication interval depends on many factors such as the degree of contamination, operating temperature, load, etc. The following values can thus serve only as a guide.

## Lubrication notes

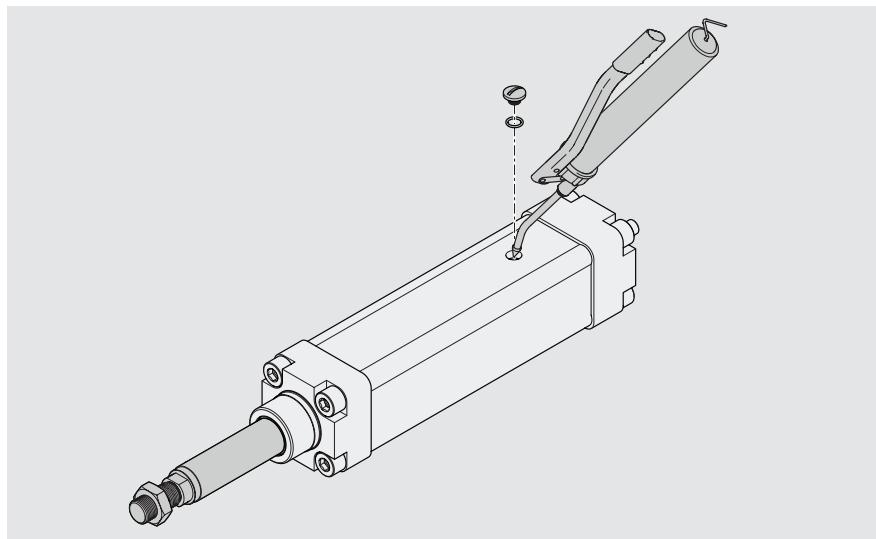

Basic lubrication is applied in-factory before shipment.

The EMC is designed for grease lubrication (using a manual grease gun with extension tube and nozzle).

The only maintenance required is lubrication of the ball screw assembly via the lube port.

For lubrication, retract the piston to the position S.

For more information, see "Mounting Instructions for EMC," R320103103

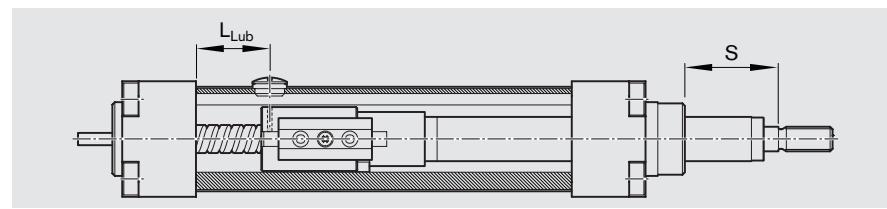

**Relubrication intervals for  
NLGI-2 greases**

Limit conditions:

Load =  $\leq 0.2 \text{ C}$

$n_{\min}$  =  $100 \text{ min}^{-1}$   
 Orientation: any  
 Operating mode: no short strokes  
 $(s_{\max} < 100 \text{ mm})$   
 Sealing: standard

EMC size	Ball screw lead P (mm)	Revolutions U (mill.)	Stroke (km)	Grease relubricating quantity (g)	L_Lub (mm)	S (mm)

# Motors

## Overview

The motor is selected after determining the main application data (geometry, drive type, required thrust, speed, and stroke).

### Type

#### MSK

The **MSK** range of **servo motors** has a wide power spectrum and narrow size increments. The high torque density of these synchronous servo motors allows a particularly compact design with high torques.

#### Specification:

- Smooth shaft with shaft seal ring
- Multi-turn absolute encoder (Hiperface),  $128 \cdot 2^{13}$  increments with 4096 revolutions. With this encoder type, the absolute axis position is saved even after the power is switched off.
- Cooling system: Natural convection
- Protection class IP65
- With or without holding brake

#### Product advantages:

- High operational reliability
- Compact construction
- High-performance and dynamic
- High torque density
- High protection rating IP65
- Maximum precision through optical encoder

#### MSM

The maintenance-free **servo motors MSM** expand the digital drive technology portfolio in the lower power range.

Offering high power density in a compact design with minimized flange dimensions, this range of motors is ideal for machine concepts for high dynamic processes.

#### Specification:

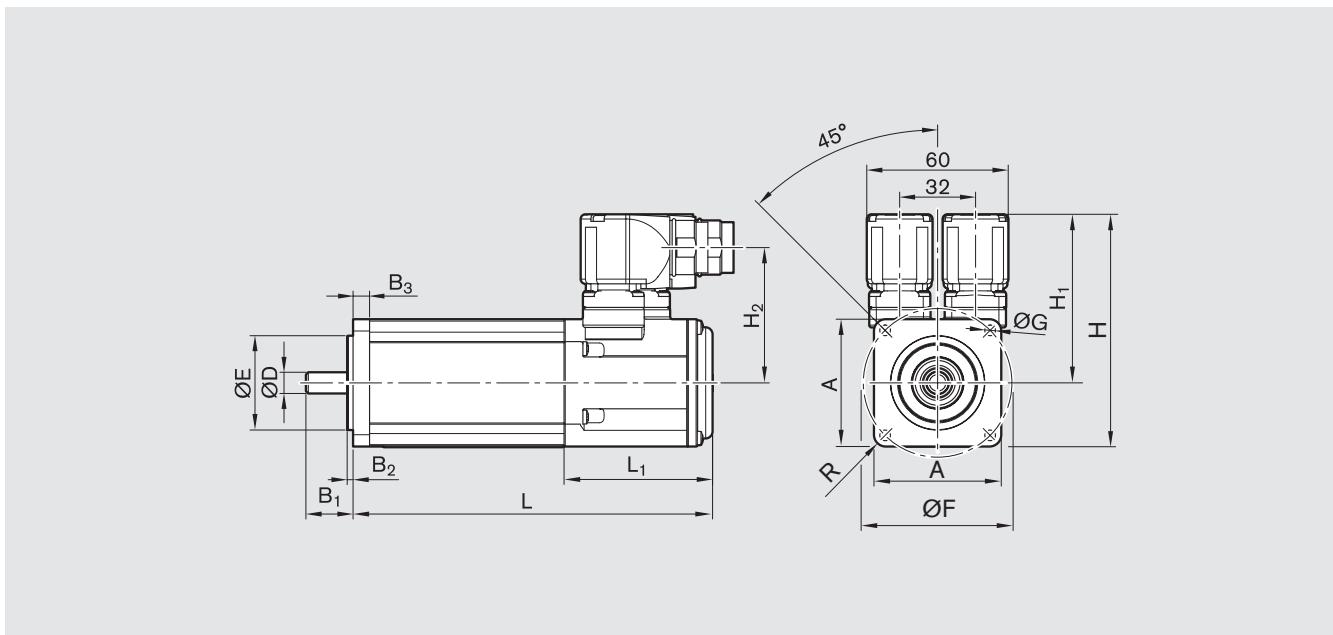

- Smooth shaft
- Multi-turn absolute encoder (Hiperface)
- Cooling system: Natural convection
- Protection class IP54
- With or without holding brake

#### Product advantages:

- High operational reliability
- Maintenance-free operation (through brushless design and the use of long-lasting grease-lubricated bearings)
- High performance data
- High dynamics (through favorable torque-inertia mass ratio)
- Simple cable management and quick start-up

## Notes

## Configuration and Ordering

The EMC is available in fixed lengths or freely configurable lengths. For freely configurable EMC versions, please specify the order code.

Size Part number	Mechanical cylinder system					
	Screw lead (mm)	Max. travel (mm)	Seal system	Preload of ball nut	Tolerance grade	Ball nut
EMC32 R156010000	5 [01]	[...]	Standard [1]	Reduced backlash [1]	T7	Standard [01]
	10 [02]	[...]		2% preload [3]		
EMC40 R156020000	5 [01]	[...]	Standard [1]	Reduced backlash [1]	T7	Standard [01]
	10 [02]	[...]		2% preload [3]		
	16 [03]	[...]		2% preload [3]		
EMC50 R156030000	5 [01]	[...]	Standard [1]	Reduced backlash [1]	T7	Standard [01]
	10 [02]	[...]		2% preload [3]		
	20 [04]	[...]		2% preload [3]		

### EMC fixed lengths

EMCs with fixed lengths have faster delivery times than EMCs with freely configurable lengths.

#### Note:

The faster delivery times apply only to the fixed-length EMC without attachments.

Fixed-length EMCs are as defined in the table. In addition, they have

- a standard seal
- reduced backlash
- tolerance grade T7.

For fixed lengths with fixed strokes, please select the part number from the table.

EMC size	Ball screw $d_0$ (mm)	Lead P (mm)	Part number for max. travel (mm)			
			100	200	320	400

# Technical Inquiry Sheet for Electromechanical Cylinders

**Customer:** \_\_\_\_\_  
**Tel.:** \_\_\_\_\_  
**e-mail:** \_\_\_\_\_

**Description of application:**

---

---

**Operating conditions (cycle)**

<b>Loads (dynamic) (N)</b>	<b>Travel speeds (m/s)</b>	<b>Discrete time steps (s)</b>
$F_1 =$	at $v_1 =$	for $t_1 =$
$F_2 =$	at $v_2 =$	for $t_2 =$
$F_3 =$	at $v_3 =$	for $t_3 =$
$F_4 =$	at $v_4 =$	for $t_4 =$
$F_5 =$	at $v_5 =$	for $t_5 =$
$F_6 =$	at $v_6 =$	for $t_6 =$

(Please also state the time for any pauses.)

Maximum static load on bearing (if known): \_\_\_\_\_ N

Required service life: \_\_\_\_\_ operating hours

EMC duty cycle: \_\_\_\_\_ % or \_\_\_\_\_ cycles per minute/hour/day

Effective stroke (useful stroke): \_\_\_\_\_ mm

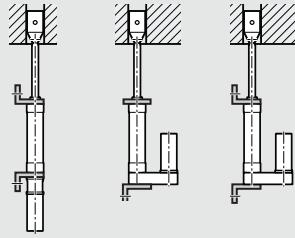

EMC mounting orientation: Horizontal

Vertical

**Installation scenarios:**

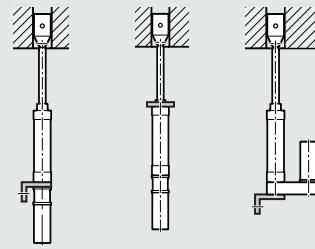

**Case 1**

Fixed mounting to head and end cap  
(flange or foot mounting).

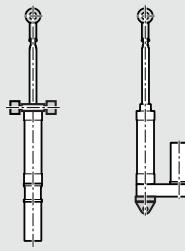

**Case 2**

Fixed mounting to head cap or end cap  
(flange or foot mounting).

**Case 3**

All types of articulated mounting.  
Pivotal or swivel mountings.

Motor attachment via

Motor mount/coupling

Timing belt side drive

Other information (e.g. exceptional operating conditions):
