

New Fixed Displacement Industrial Hydraulic Power Packs

The Drive & Control Company

Designed for Industrial Applications . . .

Delivered in Minimal Time . . .

Standard Features:

- Pressures up to 3000 PSI
- Flow: 0.4 to 10 GPM
- Fixed displacement pumps
- Electric Motor:
1/2 - 20 HP @ 1750 rpm
- System Relief Valve and Gauge
- 20 μ absolute
In-tank return filter/filler/breather
- Check valve in pressure line
- In-tank return down line
- Tank Capacities: 2-1/2 to 20 gal.

Options:

- Bar manifold up to six stations
- Heat exchangers

Features & Benefits

Factory Built Units

The Rexroth standard power pack line has been designed to industrial standards and features a wide range of fixed displacement pumps along with an extensive line of motor and valve options. Available flow rates range from 0.4 to 10.0 GPM with 2.5, 5, 10, 15, and 20 gallon steel reservoirs. The availability of 1/2 to 20 HP electric motors, and optional bar manifolds with up to 6 valve stations (D03) will cover most standard applications. All standard power packs come supplied with our factory warranty and international serviceability.

Standard Power Packs

Each standard power pack is equipped with a fluid level indicator with thermometer, pressure line check valve, system relief with pressure gauge, auxiliary down line, and in-tank return filter. The return line filter includes a filler-breather, visual clogging indicator, and a 20 μ absolute filter element.

Water or air cooled heat exchangers are available as an option to the standard power pack. Bar Manifolds with up to 6 valve stations (D03) are also available.

Electric Motors are standard TEFC, 1750 rpm, 3 phase. Single phase is available with 1/2, 3/4 and 1 HP.

Availability

The fixed displacement power pack is a pre-engineered power unit, and is fabricated from standard industrial grade hydraulic components and accessories. This allows Rexroth to offer competitively priced power units with a minimal delivery time. This also results in ease of maintenance and availability of replacement parts.

Operation

Fill reservoir with premium grade hydraulic fluid (Mobil DTE 26 or equivalent). Maintain fluid level at the top of the clear portion of the sight glass during machine operation. Electrical connections on the motor must conform to the motor nameplate. Rotation direction is checked by "jogging" the motor. (See Rexroth Data Sheet RA 07 900, attached to power pack, for complete start-up instructions.)

These units are designed to operate with working pressures up to 3000 PSI (210 Bar). Standard power packs are designed under the rigid standards of ISO 9001 and maintain the high standards of workmanship and dependability you expect from Rexroth. The ease of operation and low maintenance of the power pack provides years of quality performance without downtime or worry.

Fixed Displacement Power Pack Model Code

PP							*
Power Pack		Directional and Modular Valves = specified in clear text					
Reservoir Size		Optional Heat Exchanger					
2.5 Gallon (9.5 L) =		H1 = Water/Oil Type, all Sizes					
5 Gallon (19.0 L) =		H2 = Air/Oil Type, Sizes 2.5 & 5 Gallon					
10 Gallon (38.0 L) =		H3 = Air/Oil Type, Sizes 10, 15 & 20 Gallon					
15 Gallon (57.0 L) =							
20 Gallon (76.0 L) =							
Pump Size		Optional D03 Bar Manifold with Pressure Gauge and Relief Valve					
Pump Model = see Pages 3–7							
Gear Pump Options Available:							
Model P1 Sizes 4 to 17		BM1 = with 1 Station Bar Manifold					
Model G2 Sizes 004 to 022		BM2 = with 2 Station Bar Manifold					
		BM3 = with 3 Station Bar Manifold					
		BM4 = with 4 Station Bar Manifold					
		BM5 = with 5 Station Bar Manifold					
		BM6 = with 6 Station Bar Manifold					
Motor Horsepower = see pages 3–7		RV = Relief Valve & Pressure Gauge					
See basic unit table for horsepower (HP based on reservoir & pump size)							

Example: PP 10 G2-005 3 BM3 H1
