

**HYDAC**

## **HYDAC Core Stocking Program**

**RELIABLE PARTS. SHORT LEAD TIMES. WEEKLY UPDATES.**

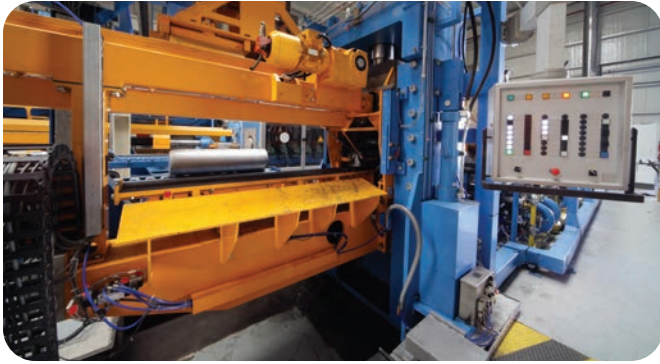

In heavy industrial environments like steel mills and energy plants, downtime can be costly while waiting for parts to arrive with a long lead time. The HYDAC Core Stocking Program ensures you get the parts you need reliably and quickly by keeping specific part numbers on hand for shipping in as little as five working days. New part numbers are added each week, so you always have more options for quick delivery.

Want to know the stocked part numbers? Sign up for weekly email updates for direct access to a complete list of in-stock, ready-to-ship parts. It's quick to scan, easy to reference, and keeps you informed on the latest stocked additions. This stocked list also doubles as a resource for alternate part numbers. If you don't see the exact part you need, a compatible replacement may be available with a five-day lead time.
