

HYDAC

HYDAC Filtration

Approximately 70% of hydraulic and lubrication system breakdowns can be attributed to oil condition. This can be a result of using incorrect filter material, improper placement or size, or not changing the filter frequently enough, which leads to increased contamination.

HYDAC offers an extremely wide range of filters for any application need, as the optimal filtration solution prevents damage caused by contamination, greatly increases system availability and productivity, and extends equipment service life. With HYDAC filtration, you have your pick of filters and filter materials best suited to your system and its requirements. And, with the HYDAC Core Stocking Program, you could even get the filter you need or a suitable alternative shipped in as little as five business days.

Not sure if you're using the right filter or if your filter is functioning efficiently? Test your oil for free with HYDAC's BIG Oil Sampling Program through Evolution Motion Solutions. This program goes beyond basic testing: it delivers actionable insights, clear maintenance strategies, and sustainably-focused solutions—including the best-fit filtration solution—designed to extend equipment life, minimize downtime, and reduce environmental footprint.

How Evolution Can Support You

As an engineering partner, systems integrator, and value-added distributor (ESV), we work with you closely to learn and understand your systems, diagnose hydraulic fluid issues, and help select the best-fit HYDAC filtration solution. With decades of application and filtration experience, paired with Evolution Inventory Management (EIM), we'll confidently select the best filtration option and work with you to hold protected stock for future replacements.

In addition, we can even combine your filter into a complete system solution, whether that's a kit, manifold, assembly, or package, which helps to eliminate part numbers and ensure each component functions well together. We can even private label for after-market business. Let Evolution and HYDAC help you protect the most valuable assets in your machines with tailored filtration solutions.
