

HYDAC

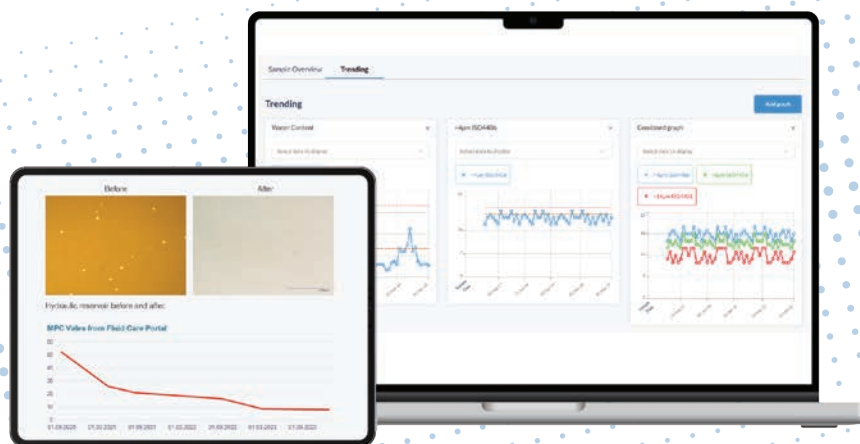

HYDAC New Oil Analysis Program

**A FLUID CARE PROGRAM TO MAXIMIZE EQUIPMENT
LIFE AND MINIMIZE ENVIRONMENTAL IMPACT**

Reactive maintenance and unexpected downtime are costly and disruptive. Many teams lack the data-driven insights needed to catch fluid issues before they become equipment failures, and with a significant amount of hydraulic system failures linked to fluid condition, relying on generic laboratory reports isn't enough. HYDAC's New Oil Analysis Program goes beyond basic testing: it delivers actionable insights, clear maintenance strategies, and sustainably-focused solutions designed to extend equipment life, minimize downtime, and reduce environmental footprint.

With HYDAC's New Oil Analysis Program, you can:

- Support your maintenance team with clear recommendations tied directly to your assets
- Gain visibility with transparent documentation and fluid history tracking
- Extend equipment lifetime and optimize machine health with predictive maintenance
- Reduce costs and environmental impact through better fluid conditioning and reduced fluid consumption

How it Works

- 1. Sample Collection:** Either you or an Evolution Motion Solutions sales engineer collects your oil sample, noting the machine or system it belongs to
- 2. Portal Enrollment:** Your Evolution sales partner helps you sign up for the free HYDAC Fluid Care Portal and adds preferred contacts for result notifications
- 3. Sample Submission:** You select your tier of oil testing, and your sales partner submits your oil sample with free shipping
- 4. Laboratory Analysis:** HYDAC analyzes the fluid in its own labs and stores the results permanently in the Fluid Care Portal
- 5. Actionable Recommendations:** HYDAC experts interpret the data and provide corrective actions, from maintenance strategies to sustainability-focused solutions
- 6. Review and Plan:** Your Evolution sales partner reviews the results with you, discusses the findings, and creates the best steps forward

Ask Yourself

- What's your process when test results come in? Do you act on them or file them away?
- Do you know how long each oil batch in your system can be safely used?
- When was the last time you validated your filter change intervals?
- Which machines are most critical, and are you protecting them proactively?

Through Evolution Motion Solutions, your local HYDAC partner, you don't have to guess. You'll have the data and guidance you need to protect your machines, plan ahead, and operate more sustainably.
