

Evolution Mobile Valve Assembly and Testing

At Evolution Motion Solutions, we design, deliver, and test valve assemblies that align with your machine's exact requirements. Whether mobile sectional valves, cartridge valve manifolds, or industrial bar manifolds, our team ensures each assembly is configured to meet your performance goals and support your product demands. We work closely with OEMs to understand project needs and provide flexible, responsive solutions, resulting in assemblies engineered to perform reliably. And, since we design, engineer, and test in-house, we can deliver faster than traditional manufacturing.

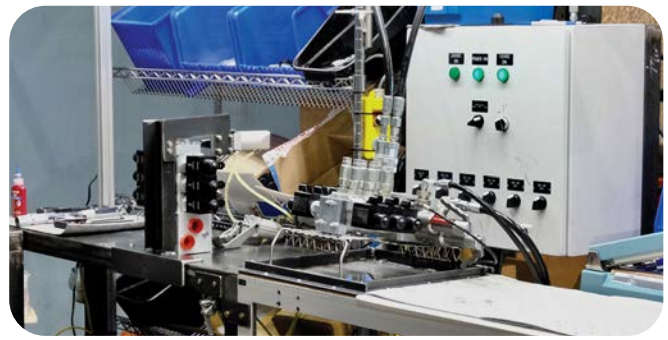

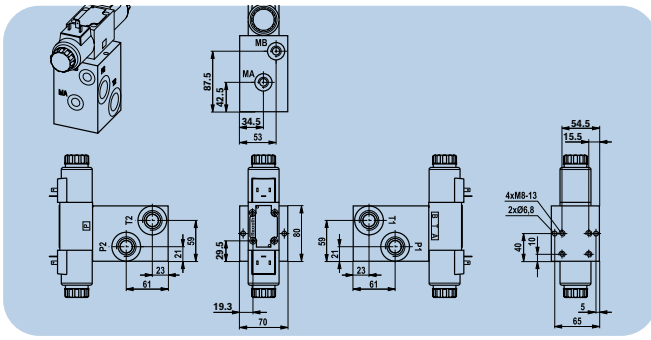

- Shorter lead times through available inventory and rapid assembly
- Reduced downtime with assemblies fully tested and validated
- Lower costs from streamlined configuration and kitting services
- Components sourced from leading suppliers known for quality and reliability
- Detailed sizing, 3D models, and renderings, so you can visualize and plan before installation

In-House Capabilities for Valve Assembly and Testing

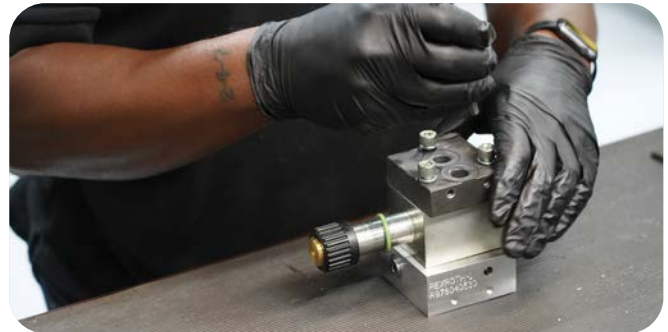

Assembly and Configuration

- 2D and 3D valve models and configurations for design support
- Precision assembly with proper torque
- Custom inlets, manifolds, and mid-sections
- Wide range of accessories, including fittings, gauges, cables, brackets, and custom painting

Testing and Quality Inspection

- Full function testing is available
- Additional inspection beyond supplier checks
- Custom testing available by request

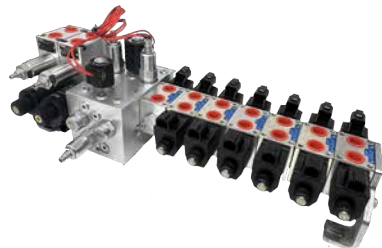

Kitting Services

- Assemblies designed with fittings, gauges, cables, brackets, and other accessories

Lifecycle Support

- Complete project support from concept and build to delivery
